Submissions & Contributions

Railtalk Magazine, a magazine written by the Enthusiast for the Enthusiast. So why not join the team. We are always looking for talented photographers and writers to join us at Railtalk. Be it though pictorial submissions or via a written article featuring an event or railtour, we greatly appreciate any contributions to the magazine however big or small.

Photographic Contributions

All Photographic contributions should to be sent to us via email, post or via the members section page on our website. Contact addresses are provided above.

All images should be provided at a resolution of at least 2400px x 1700px at 240dpi.

Welcome to Issue 241

In the news this month, two announcements that might come as a surprise to some and also might open a 'can of worms' as to why would you?. I will let you decide which is which.....

Arriva's open access operator Grand Central has secured an agreement to lease four additional five-car Class 180 trains from Angel Trains, taking its fleet to 14, to support a proposed service between Newcastle and Brighton.

The proposed service running up to five times daily in each direction remains subject to Office of Rail & Road approval of an application submitted in December 2025.

If the service is approved, the four Alstom-built DMUs which have been out of service for almost three years would enter service with Grand Central following refurbishment at Arriva TrainCare's Eastleigh depot.

The proposed services would call at at Newcastle, Durham, Darlington, Northallerton, York, Doncaster, Sheffield, Derby, Burton-on-Trent, Birmingham New Street, Warwick Parkway, Banbury, Oxford, Reading, Wokingham, Guildford, Redhill, London Gatwick, Haywards Heath and Brighton.

Chris Brandon, Director at Grand Central, said the agreement to lease the trainsets, which was announced on October 1st, 'means we're one step closer to this route becoming a reality, and we look forward to the ORR's response'.

Arriva's Business Development Director Craig Nicolson said 'the agreement also demonstrates our continued confidence in the growth potential of open access rail services and our commitment to investing in the UK's railway'.

Also this month comes the announcement that.....

East Midlands Railway is to extend the lease of its Beacon Rail owned Bombardier Transportation Class 222 Meridian inter-city diesel multiple-unit fleet because of delays to the introduction of new Hitachi Rail Class 810 Aurora electro-diesel units.

The Class 810 trainsets were originally due to be in service by December 2022. However, the trains first carried passengers in December 2025, and one train was extensively damaged in the fatal collision at Elstow south of Bedford on June 19th.

In July EMR introduced a reduced timetable in an effort to mitigate the poor availability of the Class 810 fleet and also problems with the maintenance of its Class 222 DEMUs, which has been undertaken by Hitachi since the transfer of Derby Etches Park depot from Alstom in preparation for the Class 810 fleet to be based there.

The lease extension will also require the direct award of a Train Services Agreement for Hitachi to continue maintaining the Class 222 fleet, as a change of maintenance contractor is not considered viable.

The £1.6m maintenance agreement is to run to August 22 2027, with an option for EMR to extend the amended agreement for up to a further six months with a maximum expiry date of February 22 2028.

As well as ongoing maintenance, the extended contract will covers support for the EMR's Class 222 fleet withdrawal programme, vehicle return, associated transition obligations and the phased introduction and stabilisation of the Class 810 fleet.

Once again, thanks for all the photos sent in this month, we really appreciate the time taken to send them to us. Until next month, stay safe. **Andy**

Avanti West Coast delivers over £5bn economic boost to UK, says new report

Avanti West Coast generated over £5bn in value to the UK economy last year, according to a new report released on September 8th. Unveiled at the intercity operator's annual Stakeholder Conference in Manchester, the study shows the positive impact that the intercity operator had across the regions it serves including London, the North West, West Midlands, Scotland and North Wales.
It calculates that for every £1 invested in Avanti West Coast's services, staff and supply chain, £5.10 of wider economic value is generated.

The independent report, which was produced by transport consultants Steer, outlines that Avanti West Coast services deliver over £4bn in economic, social and environmental benefits. These include time savings to passengers, the social and environmental benefits of reduced car and air travel; and the productivity benefits from connecting some of the UK's biggest cities.

Spread across the UK, £1.6bn of these benefits are in London, with £1.2bn in the North West of England, £640.9m in the West Midlands, £304.m in Scotland, and £154.0m in Wales.

It also highlights the role rail plays in supporting a more sustainable future, helping reduce congestion and carbon emissions while providing an alternative to road and domestic air travel. In 2025, journeys on Avanti West Coast services prevented more than two billion kilometres of road travel and in turn 261,000 tonnes of carbon emissions. This generated environmental benefits worth more than £100m, alongside wider societal benefits from reduced congestion. The report estimates that over one million air journeys are avoided annually when passengers use Avanti services, which is the equivalent to over 114,000 tonnes of carbon dioxide not being emitted.

Through community partnerships, education programmes and initiatives that improve accessibility and inclusion, Avanti West Coast generated approximately £471m of social value. More than 2,000 young people were supported through educational initiatives, Passenger Assistance usage increased by 30 percent, and 290 community projects were delivered across our route, helping to create opportunities, build skills and strengthen local communities.

Furthermore, the operator invests over £700m into suppliers along the West Coast Main Line route – with 41 percent of this spend in London, 20 percent in North West England, 17 percent the West Midlands, and seven percent each in Scotland and Wales. These includes contracts for cleaning to ensure trains and stations are at the top cleanliness; catering for stocking with products before departure; food and drink suppliers to provide customers with local produce; and with fleet suppliers as part of the train maintenance and upgrade programmes.

The operator has invested around £100m into its staff, including salaries, uniforms, equipment and training. This impact, as well as the supply chain investments, leads to further £523.1m investment when employees of Avanti West Coast and its supplier spend their earnings in the wider economy, with this expenditure equivalent to supporting a further 6,500 jobs in the UK.

Andy Mellors, Managing Director at Avanti West Coast, said: "This report highlights the wider impact of Avanti West Coast in creating value through everyday railway journeys.

"We're incredibly proud to serve the towns, cities and regions across the West Coast Main Line. It is important that the value we create extends beyond the railway itself – supporting jobs and businesses, improving connectivity between major economic centres, and delivering benefits for customers, communities and taxpayers alike.

"The true value of train travel is often overlooked, with each journey made having a different, individual reason. Our services enable people to travel for work, study, leisure, or to see friends and family, and provide access to opportunities which enable businesses to grow and allow communities to thrive.

"This report measures the value of connection in pounds, places and outcomes. But its real value is reflected in the opportunities created, the lives changed and the stories that unfold across our network every day."

Coventry named station of the year at National Rail Awards

Coventry railway station has been honoured at a prestigious railway awards ceremony. Managed by Avanti West Coast, Coventry was named ‘Large Station of the Year’ at the National Rail Awards.

Members of the station team were on hand to receive the award at the event which was held in London.

Over recent years the station has undergone a massive transformation, turning it into a welcoming gateway to the city. Other nominees in the category included Nottingham, Milton Keynes Central and London St Pancras International.

National Rail Awards’ judges cited, “the recent investments to this station are really proving their worth.” They also paid tribute to the well-maintained facilities, the retail options available and helpful staff who work at Coventry.

In April last year, Avanti West Coast – together with Network Rail and Railway Heritage Trust, completed a project to replace the skylights on Platform 1 as part of a joint £600,000 investment.

The skylights and signage work were part of an ongoing transformation, which in 2022, saw the opening of the £82million purpose-built new look main building and multi-storey car park with a connecting footbridge to all four platforms.

In addition, Avanti West Coast also worked with the Railway Heritage Trust to renovate the station’s unique tiled walls, whilst also providing a more prominent display for the old steam train nameplate ‘City of Coventry’.

Maria McCarron, Avanti West Coast Station Manager at Coventry said: “I’m so proud for Coventry to win this award, and just absolutely delighted that my team have been recognised for their hard work and dedication to deliver a great experience for our customers every day.

“The station has gone through a remarkable transformation over recent years, making it a gateway to the city but also an important transport hub for the region.”

SRSA Delivers Major Drainage Infrastructure Renewal at Gobowen

The South Rail Systems Alliance (SRSA) Drainage team has successfully completed a major renewal of critical cross-track drainage infrastructure at Gobowen, Shropshire. The project centred on the replacement of an ageing siphon that carries a nearby river beneath the railway, helping to protect both the rail network and surrounding area from flooding. Before work could begin, the team worked closely with Network Rail, Shropshire Council, local landowners, the Lead Local Flood Authority and Natural Resources Wales to secure the necessary permits, approvals and environmental consents.

To enable construction while maintaining the natural flow of the watercourse, a temporary water management system was installed. This included a dam, over-pumping arrangements, and contingency pumping equipment, allowing the river to be safely diverted away from the worksite.

With these measures in place, the team removed sections of track and excavated around the existing structure to a depth of approximately two metres below track level, with even deeper excavations required on either side of the railway embankment. This extensive enabling work provided access to the existing siphon and laid the foundations for the installation of the new drainage infrastructure. The scheme represents a significant investment in the resilience of the railway, ensuring the route is better protected against future drainage and flood-related challenges while maintaining safe and reliable rail operations for years to come.

This enabled the installation of a new prefabricated set of headwall components, incorporating treble 900mm diameter siphon bores. Following installation, the formation and track were fully reinstated, including stressing and tamping, alongside all associated groundworks to hand back to the client with the highest track quality.

Other parts of the project scope included the installation of a solar and hydro-powered, fully automated and self-managing electric trash screen. The system prevents debris from entering the siphon by automatically removing it onto a conveyor belt, which then discharges the material into the cess. This new system significantly reduces the ongoing maintenance burden associated with the asset and significantly reduces pollution for the local wildlife and waterways.

Speaking about the successful delivery of the scheme, SRSA Production Manager, Joe Smales said “Ultimately, the completed infrastructure upgrades provide a much more resilient solution and should significantly reduce the risk of flooding that has previously occurred. The new system removes a lot of the difficulties associated with maintaining and clearing the existing asset.

“I’m thankful for our team, supply chain and organisations we worked alongside on a really significant project for the local community, with a substantial amount of complex civil engineering, railway and environmental work delivered within the project.”

DC Rail Freight

The superbly re-liveried Class 60 022 ‘Ingleborough’ and fellow DCR loco 56 103 are seen running past Coppull Moor on a route learning working from Carlisle to Chaddesden on October 2nd. *John Sloane*

Class 60 022 and 56 103 with a Carlisle to Colwick light engine move pass Moore on October 2nd. *Mark Enderby*

Class 60 022 and 56 103 with a Carlisle to Colwick light engine move pass Moore on October 2nd. *Mark Enderby*

Direct Rail Services

On September 12th, as seems to be the norm of late, 4S43, the morning 'Tesco' train, roars through Golborne with Class 88 007 leading 68 006, the 68 being heard for several minutes before the train came into view. *Jeff Nicholls*

Celebration of 20 years of rail freight

Direct Rail Services (DRS) and Tesco have celebrated 20 years of partnership, a milestone that reflects their commitment to transforming the movement of goods across the UK through sustainable rail freight. The partnership, which began with a single service, has grown into one of the UK's most successful rail freight operations, with DRS now operating up to 10 services per day on behalf of Tesco. Over the last 20 years, the collaboration has helped remove hundreds of thousands of lorry journeys from Britain's roads, reducing congestion and significantly lowering carbon emissions. Each train removes around 40 lorries from the road network, meaning hundreds of lorries off the road network every day. Rail freight produces at least 76% less carbon dioxide than road haulage, helping Tesco and DRS support the UK's net zero ambitions.

The milestone, celebrated on Tuesday September 22nd, comes just a week after DRS and Tesco were named winners of the Freight & Logistics Achievement of the Year category at the National Rail Awards, recognising the success and impact of the partnership over the past two decades.

The occasion was marked with the unveiling of a new name for 88 010 – Tesco 20 years of rail freight – at Tesco's Daventry terminal. NTS's co-CEO Ciara Middlehurst and Tesco's Mathew Rhind, UK Transport Distribution Director, revealed the new nameplate. There was also an extra special cake produced for the celebration in the shape of 88010 with a Tesco container in tow.

Speaking at the event, Ciara Middlehurst, Co-CEO of Nuclear Transport Solutions (NTS), owner and operator of DRS, said: "It is an absolute pleasure to celebrate this significant milestone. DRS has been Tesco's trusted rail partner from the very beginning and together we have built one of the most recognisable and successful rail freight partnerships in the country. What started as a single service has grown year-on-year into a major operation that moves millions of miles' worth of freight while delivering substantial environmental benefits.

"This partnership demonstrates the vital role rail freight can play in supporting the UK's economy while reducing emissions and congestion. With the UK Government committed to increasing rail freight growth in the years ahead, partnerships like this will have an increasingly important role to play."

Ciara also paid tribute to the employees across DRS whose efforts have underpinned the partnership's success.

"The achievements of the last 20 years would not have been possible without the dedication and professionalism of our people. From drivers, planners and fitters to control staff and support teams, their commitment ensures products reach stores reliably and efficiently every day. Their work helps keep shelves stocked and products fresh for customers across the country, and I want to thank every colleague who has played a part in this success."

Innovation has been a key driver throughout the partnership. DRS has continually invested in new operating models, wagon designs and technologies to improve performance and sustainability. The company was also the first rail freight operator in the UK to introduce a mainline overhead-powered bi-mode locomotive with its Class 88 fleet. Capable of hauling up to 1,500 tonnes of freight with zero exhaust emissions when operating under electric power, the Class 88 has set the benchmark for sustainable and flexible rail freight operations for almost a decade. Looking ahead, DRS and Tesco remain committed to growing the use of rail freight, identifying new opportunities to reduce carbon emissions and continuing to deliver efficient, reliable and sustainable supply chain solutions.

Ciara added: "Tesco has worked alongside us every step of the way, helping drive greater efficiency, reliability and continuous improvement. Together, we have grown rail freight, overcome challenges, embraced innovation and demonstrated what can be achieved when organisations work towards a common goal. We are incredibly proud to have played a part in Tesco's rail freight journey and look forward to continuing that journey together for many years to come."

Direct Rail Services

Class 68 007, 68 031 and 66 434 pass Winwick en-route to Carlisle on September 14th. *John Sloane*

On September 10th, Class 66 431 passes through Horton in Ribblesdale with the daily engineers train from Carlisle - Crewe Basford Hall. *Michael Lynam*

On September 17th, Class 68 008 'Avenger' heads the 4H43 Daventry - Trafford Park 'Tesco' train through Deansgate. *Harold Hull*

Class 90 011 and 90 015 are seen at Stafford with 4L67, the 09:59 Trafford Park F.L.T. to Felixstowe North F.L.T. on September 28th. *Derek Elston*

Freightliner

Class 66 509 ‘Freightliner Retirement Association’ passes Trimley with 4L93 09:51 Lawley Street - Felixstowe North on September 16th. *John Balaam*

Class 66 532 ‘P & O Nedloyd Atlas’ takes the 4E56 15:28 Felixstowe North - Leeds through Trimley on September 16th. *John Balaam*

Due to problems further North the 4L60 07:20 Trafford Park F.L.T. to London Gateway Freightliner passes Northampton running 30 minutes down behind Class 66 589 on September 3rd. *Derek Elston*

Freightliner

Class 66 525 slowly approaches Eastleigh with a northbound liner on September 8th. *John Sloane*

The Wentloog to Southampton service on September 10th was very lightly loaded as it passed through Swaythling behind Class 66 517. *John Sloane*

Class 66 566 passes through Swaythling station with a Lawley St. to Southampton liner on September 10th. *John Sloane*

Freightliner

Special liveried Class 66 502 passes through St. Denys with a well loaded Lawley St. to Southampton liner on September 9th.
John Sloane

FREIGHTLINER WELCOMES GOVERNMENT'S NEW RAIL FREIGHT GROWTH TARGET

Freightliner welcomes the Government's new interim rail freight growth target of 40% by 2040, describing it as an important stepping stone towards the longer-term ambition of 75% growth by 2050.

The target provides clear recognition of the vital role rail freight plays in supporting economic growth, building more resilient supply chains and accelerating decarbonisation across the UK economy.

The 2040 target is particularly significant because the date is now within touching distance, bringing into sharper focus the planning, infrastructure and investment decisions needed to deliver rail freight growth. It creates a clear imperative for Government and industry to work together on the planning, infrastructure and investment decisions to achieve the target.

For the first time, rail freight growth targets have been broken down by commodity, providing a clearer picture of the sectors that will drive future growth. High-value goods, which include intermodal traffic, are expected to grow by 65% by 2040, underlining the important role that moving more containers by rail will play in supporting economic growth and helping to decarbonise supply chains.

As the UK's largest intermodal rail freight operator, Freightliner is well placed to help deliver that growth. The company moves deep-sea, European and domestic containers by rail across its national network and, as part of the wider CMA CGM Group, benefits from the backing, expertise and scale of one of the world's leading transport and logistics businesses, helping support continued investment in rail freight services and capacity across the UK.

Delivering the target will require continued partnership between Government and industry. Alongside investment in network capacity and capability, private sector investment will play a vital role. Freightliner is already investing in its future fleet, with 150 new Shortliner wagons entering service next year and further wagon investment planned thereafter. These investments are designed to increase existing capacity and improve the utilisation of rail freight services, supporting future growth and helping more freight move by rail.

Freightliner also believes that long-term certainty will be essential to maintaining investor confidence. As the Railways Bill progresses through Parliament, it is vital that legislation provides a framework capable of supporting rail freight targets and giving businesses the confidence to invest. Great British Railways will then have a key role in delivering that ambition through policies, contractual frameworks, and access decisions that drive growth, unlock private sector investment and maximise the benefits rail freight brings to trade, supply chains, and the environment.

Freightliner

Class 90 042 and 90 045, both in Powerhaul livery, drift past Bradley with a Coatbridge to Crewe liner on September 19th. *John Sloane*

On September 9th, the Wentloog to Southampton liner is whisked through St. Denys by Class 66 566. *John Sloane*

Greater Anglia

Class 755 337 calls at Saxmundham whilst working 2D80 13:16 Ipswich - Lowestoft service on September 16th. *John Balaam*

Class 755 335 is seen at Saxmundham, working 2D75 11:06 Lowestoft - Ipswich service on September 16th. *John Balaam*

Class 755 328 stands at Felixstowe waiting to work 2P23 16:28 to Ipswich on September 16th. *John Balaam*

GBRf

Class 66 735 with the 6M05 Tinsley - Coton Hill passes through Wellington on September 21st. *Richard Hargreaves*

On September 9th, Class 99 002 on a Garston to Dagenham working passes Acton Bridge. *Mark Enderby*

Class 66 783 with the 4L67 Ditton - Felixtowe intermodal passes through Stafford on September 22nd. *Richard Hargreaves*

GBRf

Shortly before going over to Class 99 operation, Class 66 715 runs through Stafford, working 4L09 the 09:07 Widnes to London Gateway on September 5th. *Barry Longson*

Class 99 003 working the 6L48 Garston - Dagenham Dock passes through Stafford on September 26th. *Richard Hargreaves*

Class 66 734 with the 6G99 Tunstead - Banbury Reservoir Tarmac, is seen approaching Leamington Spa on September 24th. *Richard Hargreaves*

GBRf

Now seeing more use in traffic, Class 99 004 runs through Northampton on September 21st, with 4M01 the 10:57 London Gateway to East Midlands Gateway intermodal service. *Barry Longson*

On September 1st, Class 66 311 'Andrew Lartey' heads 4M36 Drax - Tuebrook through Manchester Victoria. *Harold Hull*

Class 66 798 slows to cross the junction at Heaton Norris on September 15th, working 6E10 the 11:00 Liverpool to Drax loaded Biomass. *Barry Longson*

GBRf

Class 99 003 with a Garston - Dagenham working passes Acton Bridge on September 28th. *Mark Enderby*

On September 1st, Class 66 693 passes Belfield Mill Lane working 6Z37 Rylstone - Pendleton aggregates. *Harold Hull*

On September 22nd, Class 66 741 rolls down grade from Woodley, working 4H61 the 10:35 Small Heath to Tunstead empty box wagons. *Barry Longson*

GBRf

On a drizzly autumn morning, Class 66 738 passes through the fields of Plumley hauling a few thousand tons of the Peak District from Tunstead to Small Heath Lafarge on September 23rd. *Jeff Nicholls*

On September 3rd, Class 66 798 'Justine' with 6E09 LBHT - Drax loaded Biomass heads through Castleton. *Harold Hull*

On September 2nd, Class 66 743 passes Belfield Mill Lane with 6M37 Arcow - Pendleton. *Harold Hull*

GBRf

Class 66 726 passes through Castleton on September 24th with a Biomass train from Liverpool Biomass Terminal - Drax AES. *Michael Lynam*

On September 24th, Class 66 311 passes Castleton with a rake of empty Biomass wagons from Drax AES - Liverpool Biomass Terminal. *Michael Lynam*

On September 14th, Class 69 005 'Eastleigh' leads 69 013 as 0M72 Doncaster - Longport through Castleton. *Harold Hull*

GBRf

Class 92 020 had severe wheel flats and was towed from Wembley to Eastleigh Works on a wheelskate with three stop overs, arriving just after dawn on September 14th. It is seen in front of the works on the morning of 15th. This is the first time a Class 92 locomotive has been seen at Eastleigh. *John Goodrich*

Class 66 739 passes through Preston on September 17th with a container train from Hams Hall - Mossend. *Michael Lynam*

Class 66 687, 92 020 and 66 719 stand in sidings at Basingstoke on September 13th. The convoy stayed all day after arriving early that morning, with the 92 on wheelskates and being taken to Eastleigh Works. With a 10mph speed limit the working could only move at night and took three nights to get from Wembley to Eastleigh, with stop overs at Woking and Basingstoke. *Dennis Rowland*

GBRf

On September 10th, Class 66 780 passes Horton in Ribblesdale with an aggregate train from Arcow Quarry - Pendleton, the loco having run round its train at Blea Moor. *Michael Lynam*

It's always nice to see a Class 69 at Scunthorpe, a particularly colourful one is 69 004, wearing an early version of Derby RTC livery. It is seen forging its way towards Scunthorpe station on September 11th with 6D75 Entrance C - Belmont, conveying a loaded RDT.
Steve Thompson

Class 69 013 'Andy's Man Club' passes Castleton working 0M72 Doncaster to Longport on September 18th. *Russell Clarke*

GBRf

Class 92 020 was returned to Wembley from Eastleigh Works after repairs by 66 725 on September 28th. It is seen passing Eastleigh at 16:28 running 39 minutes late. The Class 92 had been at the works for attention to severe wheel flats. *John Goodrich*

On September 10th, Class 66 695 passes through Horton in Ribblesdale with an aggregate train from Horton Quarry - Brindle Heath, having run round its train at Blea Moor. *Michael Lynam*

On September 12th, the 4E14 Felixstowe - Doncaster iPort container service, featured three locos on the front : Class 66 765, 66 767 and 66 705, seen here heading through Gainsborough Lea Road. *Steve Thompson*

GBRf

Class 66 311 passes Castleton on September 27th working 6M36 Drax to Liverpool empties as a young enthusiast looks on. *Russell Clarke*

Class 66 309 sweeps past Standish on September 22nd at the head of the Hams Hall to Mossend intermodal. *John Sloane*

Class 99 012 running light engine from Leicester - Inverness passes Moore on September 27th. *Mark Enderby*

GBRf

Class 66 671 arrives at Horton in Ribblesdale on September 10th with a rake of empty box wagons from Ashton in Makerfield, and shunts its train back into Horton Quarry. *Michael Lynam*

Class 66 305 'Embsay & Bolton Abbey Steam Railway' is seen arriving at Ely with 4E20 13:28 Felixstowe North - Doncaster on September 14th. *John Balaam*

Castleton on September 30th sees Royal Scotsman liveried Class 66 746 ‘Piper Major Iain Grant’ passing with 0F92 Doncaster to Tuebrook. *Russell Clarke*

Class 66 704 ‘Colchester Power Signalbox’ is seen at Peterborough with 4M23 10:29 Felixstowe North - Hams Hall on September 14th. *John Balaam*

Class 69 011 sits in Eastleigh East Yard on September 8th. *John Sloane*

RAIL FREIGHT GROWTH TARGET MUST BE MATCHED BY ACTION

The Government's decision to set a target for rail freight growth marks an important moment for the sector and for the wider UK economy. A commitment to increase rail freight volumes by 40% by 2040, building towards 75% growth by 2050, recognises the critical role rail freight can play in supporting economic growth, improving connectivity and helping to decarbonise the movement of goods across Britain. Every freight train can remove up to 129 lorries from the road network, helping to ease congestion, improve air quality and reduce carbon emissions, all of which will have major benefits for people across the nation. As the UK seeks to deliver major infrastructure projects, build new homes and strengthen supply chains, rail freight has a vital role to play in moving the materials that will make those ambitions a reality. From construction aggregates and cement to steel, containers and consumer goods, rail freight already underpins significant parts of the UK's economy. With the right conditions, there is considerable scope for the sector to do more.

John Smith OBE, Chief Executive Officer of GB Railfreight, said: "A target of 40% growth by 2040, building towards 75% by 2050, sends a strong signal about the future of rail freight and the contribution our sector can make to the UK economy. The challenge now is delivery. If these targets are to mean anything, the Railways Bill, the Access and Use Policy and GBR's licence must provide a clear framework for growth. Freight operators need certainty, capacity and fair access to the network if we are to turn Government's ambition into more freight on rail and fewer lorries on our roads."

While industry welcomes the ambition, targets alone will not unlock growth. Delivering them will require a railway that actively supports freight, encourages private sector investment and provides long-term confidence for customers and operators alike. Over recent decades, the rail freight sector has invested billions of pounds in locomotives, wagons, terminals and technology. That investment has been driven by confidence that freight can compete and grow. Maintaining that confidence will be essential if operators are to continue investing in the capacity needed to meet future demand. Growth will also depend on the railway demonstrating that it is a reliable, high-performing and flexible network. Businesses making long-term investment decisions need confidence that rail can provide the resilience, capacity and service levels required to support modern supply chains. Strong operational performance is not just important for existing traffic; it is essential if rail is to attract new business, unlock private investment and deliver the growth the Government wants to see.

Government also has a critical role to play in creating the right incentives for growth. Alongside a supportive legislative framework, policymakers should make full use of the levers available through rail reform to encourage more freight onto the railway. Measures such as freight growth incentives, access charge mechanisms and targeted support for key commodities can help unlock new traffic flows, stimulate investment and accelerate the shift from road to rail. This is particularly relevant for the commodities identified as growth opportunities within the target. Schemes such as Mode Shift Revenue Support already demonstrate how targeted incentives can encourage more sustainable freight movements and deliver wider economic and environmental benefits. Building on these this using the provisions set out in the Railways Bill could help turn Government ambition into measurable growth on the network.

The opportunity is particularly significant as Britain embarks on the next generation of infrastructure projects. The Chancellor's announcement yesterday regarding measures that will speed up major infrastructure projects is both welcome and necessary. Whether building new energy facilities, strengthening the electricity grid, delivering major transport schemes or supporting housing growth, the efficient movement of construction materials will be fundamental to success. Rail freight offers a proven solution, moving large volumes safely and sustainably while reducing pressure on already congested roads. For that reason, future public infrastructure programmes should be designed with rail freight in mind from the outset. Planning projects around rail-connected supply chains can help reduce costs, lower emissions and accelerate delivery, while creating long-term demand that supports further private investment across the freight sector. Major infrastructure projects provide a significant opportunity to grow rail freight. From carrying aggregates and cement to transporting steel, rail can ensure the materials needed to build Britain's future are delivered efficiently, reliably and sustainably. The Government's growth target provides a welcome statement of intent. The task now is to ensure that rail reform, network access arrangements and the future structure of Great British Railways create the conditions needed to turn that ambition into reality.

That means giving operators the confidence to invest, ensuring customers can rely on a high-performing railway and making full use of the incentives available to stimulate growth. If Britain is serious about delivering new homes, modern infrastructure and long-term economic growth, rail freight must be placed at the heart of those plans from the outset. The opportunity is there. The challenge now is turning ambition into action.

Savour The Flavour As LNER Launches New First Class Menus

Chef-inspired Chicken Milanese served with cavatelli pasta and a golden almond and raspberry frangipane tart are among the new dishes tempting customers' taste buds as LNER launches its latest First Class menus.

The onboard catering offer celebrates the very best of local produce, sourced from suppliers across the almost one-thousand-mile LNER route. Firm favourites, including the Full LNER and Full Veggie breakfasts, remain on the Signature menu which is served onboard selected morning trains.

Later in the day, Spanish-style frittata and smoky beans, and comforting beef chilli baked potatoes feature on the Dish menu. By popular request, a classic combination of pulled ham and cheddar cheese on malted bread returns to the sandwich selection, complete with a tangy mustard mayonnaise. Vegetarian options include a Mexican sweet potato salad complete with smoky beans, charred red peppers, tortilla chips and a smooth bean dip, with the option of a golden Earl Grey lemon cream-filled choux bun.

LNER Chef, Alan Thomas, said: We take great pride in preparing our specially selected dishes for our customers. Our catering teams put their heart and soul into curating our menus and sourcing our food and drinks from suppliers who are based across our route.

There is nothing quite like working in a kitchen while travelling at 125mph! I'm looking forward to sharing our new additions for Autumn, which include a variety of tasty choices to choose from.

Sara Jenson, Hospitality Manager at LNER, said: We're delighted to be launching our new First Class menus. We love promoting local, community supporting suppliers. From our popular desserts and brownies to our salads, sandwiches and savoury dishes, our selections are handpicked from independent eateries, artisan producers and other unique businesses that all have something special.

The new menus will be served between now and early December.

LNER Goes Green: Train Operator Continues to Send Zero Waste to Landfill

LNER, famous for its red trains and uniforms, is proud to be officially certified as green with the company, once again, confirmed as sending zero waste to landfill.

To celebrate Zero Waste Week in early September, LNER can reveal that it has been re-certified as a Zero Waste to Landfill company, meaning one hundred per cent of waste collected from LNER managed stations, offices or its train depot in Aberdeen is either being recycled or is being used to create energy.

1,414 tonnes of waste was collected at LNER's 11 managed stations, offices and depot last year. The majority, 1,273 tonnes, is from its stations. This also includes waste coming off any trains at those stations.

The rubbish collected is around the same weight as three 9-carriage LNER Azuma trains* which transport millions of customers across between London and the Scottish Highlands each year.

Onboard LNER trains, dedicated cleaning teams collect rubbish, including tea and coffee cups, sandwich and snack wrappers, drinks cans and crisp packets. Any waste from Newcastle, Doncaster, and Peterborough stations is sorted by hand at dedicated waste sorting hubs, making sure it is recycled responsibly.

LNER has also installed cold water points in its First Class lounges in Doncaster and Newcastle, removing bottled still water. Through this, LNER has avoided nearly 140,000 plastic bottles per year, saving over 2,000kg of plastic waste.

Caitlin Bent, Environment Manager at LNER, said: "Travelling by train with LNER is one of the most environmentally friendly ways to travel, with the majority of our 200 train services per day using electric power to carry millions of customers each year across the East Coast Main Line and beyond. However, as a business, we are proud to do much more than that to have a positive impact on our planet.

"At LNER, we put our people, places and planet at the heart of everything that we do, and that's why we're so committed to making sure that waste from our trains, stations, offices and depots is either recycled responsibly or used to create energy for homes and businesses across the country. Our teams work hard across the route to make this a reality, but we also want to thank our customers for their support too."

Note: *A 9-carriage Azuma train weighs 440 tonnes.

Northern's Class 195 107 stands at Liverpool Lime Street forming 2F85, the 10:56 to Warrington Central on September 18th. *Derek Elston*

Units: DMUs and EMUs

Northern's Class 158 754 'Settle Carlisle 150' calls at Hindley, in the suburb of Wigan, with the 14:49 Wigan Wallgate to Todmorden service on September 24th. *Paul Senior*

Northern's Class 156 405 and 156 402 call at Castleton working 2N50 Rochdale to Clitheroe service on September 30th. *Russell Clarke*

Northern's 2K60 Rose Grove to Kirby passes Castleton with Class 150 130 leading 150 102 on September 30th. *Russell Clarke*

Units: DMUs and EMUs

South Western Railway's Class 158 886 calls at Swaythling with a Salisbury to Romsey service on September 10th. *John Sloane*

Gatwick Express liveried Class 387 208 heads towards its destination at Southampton on September 9th. *John Sloane*

Northern's Class 170 455 approaches Filey station working as 1J49, the 14:00 Scarborough to Sheffield via Hull service on September 11th. *Derek Elston*

Units: DMUs and EMUs

GWR's Class 166 201 and SWR's 450 006 both on Portsmouth services cross outside St. Denys as 387 208 approaches with a Brighton train on September 9th. *John Sloane*

Northern's Class 195 128 runs beneath a rainbow at Pleasington as it works a York to Blackpool service on September 30th. *John Sloane*

Northern's Class 331 102 passes Bradley with a Liverpool Lime St. service on September 19th. *John Sloane*

Units: DMUs and EMUs

Gatwick Express liveried Class 387 203 passes Southampton Up Yard with a service from Southampton to Brighton on September 9th. *Paul Godding*

South Western Railway's Class 444 031 hurries into Swaythling with a London Waterloo service on September 10th. *John Sloane*

South Western Railway's Class 158 885 departs St. Denys with a service to Salisbury on September 9th. *John Sloane*

Units: DMUs and EMUs

South Western Railway's Class 444 016 races past Horseshoe Bridge, St. Denys with a London Waterloo to Weymouth service on September 9th. *John Sloane*

South Western Railway's Class 444 044 speeds past Swaythling with a Poole service on September 10th. *John Sloane*

South Western Railway's Class 158 886 heads out of Swaythling with a service to Salisbury on September 10th. *John Sloane*

Isle of Man

Snaefell Railway tram cars Nos. 4 and 5 stand at Laxey on September 13th shortly before the start of the days services to the summit. *Lee Stanford*

Isle of Man Steam Railway loco Nos. 13 ‘Kissack’ and 11 ‘Maitland’ pass at Castletown on September 11th. *Lee Stanford*

Isle of Man Steam Railway loco No. 13 has just been serviced and stands outside the depot at Port Erin on September 11th before working back to Douglas. *Lee Stanford*

Hythe Pier Tramway

A Hythe Pier Tramway loco is seen rattling along towards the end of the pier on September 9th. *John Sloane*

Island Line

Island Line's Class 484 002 departs Ryde Esplanade station with 2D15, the 11:26 Ryde Pier Head to Shanklin while the Island Flyer hovercraft awaits its next flight to Southsea on September 6th. *Andy Pratt*

Island Line

Hover Travel's Island Flyer awaits its next flight to Southsea while in the background Island Line's Class 484 002 runs off Ryde Pier towards Ryde Esplanade station with a service to Shanklin on September 6th. *Andy Pratt*

National Rail

On September 19th, Colas Rail's No. DR75011 arrives at Swindon working 6Q59 Didcot Tamper Sidings - Westbury. *Ken Mumford*

GBR Anglia scores 90% for punctuality in latest Rail Customer Experience Survey

GBR Anglia - which brings together the leadership of c2c, Greater Anglia and Network Rail Anglia under a single, unified structure – has scored 90% for punctuality in the latest Rail Customer Experience (RCXS) Survey figures. The Rail Customer Experience Survey (RCXS) is an industry-wide survey that gathers regular feedback from passengers about their rail journeys across the UK. From the period covering April 1st to July 25th, the survey revealed that GBR Anglia customers recognise it as one of the UK's most punctual operators, with c2c and Greater Anglia scoring 90% and the Stansted Express 92%.

GBR Anglia Chief Customer and Commercial Officer, Rob Mullen, said: "Providing customers with a safe, reliable and punctual service is our number one priority. The results of the RCXS survey reflect the continued focus on delivering reliable services and improving the customer experience across the railway in Anglia. We know there is always more work to do to improve in certain areas and we are committed to continually improving services. We are delivering improvements through our infrastructure renewals and maintenance programmes, as well as working with partners such as the British Transport Police, Samaritans, WalkSafe and local authorities to drive new safety initiatives across our network. We'll keep on working to enhance every aspect of our service for customers and communities throughout our region."

As part of GBR Anglia, c2c saw significant improvements in Value for Money and Crowding scores, with both improving by 7%, while Train Personal Safety increased by 3%. Overall, Value for Money, Punctuality and Crowding scored better than industry average. Meanwhile, Greater Anglia's Overall Satisfaction increased from 88% to 90% in the latest scores, with Train Cleanliness also improving from 84% to 86%. Additionally, Station Personal Safety and Station Cleanliness also saw improvement. Finally, satisfaction with the Stansted Express service remains strong, with Overall Satisfaction unchanged at 92%. In the latest scores, Punctuality improved from 91% to 92%, while Train Cleanliness improved from 88% to 91%. Furthermore, Train Personal Safety has increased from 91% to 93%.

Fares Advice with RailUK

This month more questions and answers on the complex ticketing system of Britain's Railways.

Super off peak timings London North Western

Q: With a super off peak on the above from Stoke to Euston, if one has already travelled Stoke to Stafford at super off peak time, broken journey there, is one allowed to board the 19:32 from Stafford to Euston? Even though if one had done it not breaking journey, one would have left Stoke on the 18:57 which isnt allowed.

A: By the restriction line no. But the "connecting service" line might enable it, it depends on how that would be interpreted in the context of break of journey.

Not valid for travel on trains timed to arrive London Terminals before 13:00.

Not valid for travel on northbound services timed to depart any station before 10:30.

Not valid for travel on services timed to depart the origin station on the ticket after 15:59 and before 19:01 in either direction.

A connecting service can be used to complete a journey begun at a valid time.

However because it isn't possible to implement restrictions based on where a train departed from before you boarded it, you can probably get an itinerary doing that. If you do and purchase the ticket for that itinerary it is contractually valid, though don't be surprised if you get a bit of hassle if RPIs board.

But these fares do not permit break of journey on the outward, so you can only do this on the return.

Overall I'd suggest getting an itinerary to do what you intend when you buy the ticket. This is the lowest chance of hassle.

Lumo-only ticket (almost) same price as Any Permitted

Q: I have ended up buying a Lumo-only ticket by mistake. This is for the return half of an Edinburgh-Poole trip.

For 40 years I always bought "super saver returns" for this sort of journey. Now that's not possible and what I should do is to buy "super offpeak singles" for each half.

Somehow I got it wrong this time. On the forum's ticket site I entered dates for the outward and return journeys and selected "Flexible tickets only" in the "Filter" box. But then, I somehow I managed to buy a £124.40 "super offpeak single" for the outward journey and a £124.00 "Lumo & SWR Only Anytime Day Single" for the return. I guess I didn't notice the 40p difference and thought both tickets must be the same type.

This is annoying. I wanted "flexible" tickets, but a "Lumo-only" ticket very much isn't flexible, is it?

I am inclined to refund it - which I think I can do, for a small fee, right?

A: But they all do it. Avanti-only fares are marginally cheaper than "any permitted" on many flows.
Essentially designed to trick people who look for the lowest price to buy them.
10p difference has been mentioned before.

Originally the Avanti-only fares were inherited from Virgin-only and were a significant saving. Then the pricing managers got hold of them.

For example, for me, Avanti First Day Return Wilmslow-Manchester is now £21.50 versus £21.70 "any permitted". So for 20p I deny myself the opportunity of using other trains, one of which also has first class sometimes. I used to use the Avanti-only fare when it was more like £11, but not any more. They (Avanti, Lumo, etc.) used to be happy with receiving 100% of the TOC-only fares, versus a percentage of the "any permitted" fare which would have been less. Then they got greedy by trying to get 100% of a fare which was almost the same as the "any permitted" fare.

Ticket Advice for All

Advice on rail ticketing is available on railforums.co.uk in the 'Fares, Tickets & Routeing' section. We believe this to be the best source of UK rail fares advice available anywhere, as we have a team of people who are familiar with the complex rail fares system who can help you. Never pay over the odds again, and ask us if you need help! See you there!

National Rail

On September 14th, Colas Rail track machine No. DR75010 heads through Swindon working 6Q58 Bristol (Kingsland Road) to Bristol (Kingsland Road via the world. *Ken Mumford*

On September 7th, Class 47 701 approaches Harrowden Junction returning 31 108 as 0M31, the 11:09 East Grinstead Sidings to Butterley M.R.C. after the Bluebell Railway Diesel Gala. *Derek Elston*

GBR Anglia in action: taking technology on tour to improve passenger journeys

Eagle-eyed passengers may have spotted a Greater Anglia train, in its Great British Railways livery, travelling on the c2c route and London Overground Mildmay line over two Sundays in July and August. Most are unlikely to have guessed that the train was using the journeys to monitor overhead lines with state-of-the-art technology called PANDAS-V.

The technology isn't currently installed on c2c and Mildmay line trains, but GBR Anglia was able to deploy it on these routes by using a Greater Anglia train with PANDAS-V on board, making the most of being a joined-up railway. GBR Anglia brings c2c, Greater Anglia and Network Rail Anglia together under one unified leadership team as part of the wider journey towards Great British Railways.

Through a camera and a sensor on the roof of the train, the PANDAS-V system assesses overhead lines continuously and reports any potential faults to Network Rail, along with an exact location and a high-resolution video clip. This gives engineers all the information they need to carry out a proactive repair or inspection, preventing delays and keeping passengers moving.

If overhead lines fall down or get tangled, the railway often has to be closed for an extended period while repairs are carried out. Spotting and fixing potential faults before they escalate helps the railway industry avoid thousands of hours of delays, while also saving the taxpayer potentially millions of pounds each year.

On Greater Anglia routes, PANDAS-V has helped engineers prevent major disruption on 15 occasions since November 2025, while operating on regular passenger services. Just outside Liverpool Street in March 2026, an alert on the PANDAS-V system allowed Network Rail to repair a defect which, if left alone for much longer, could have taken platforms 1-7 out of use at the station for a prolonged period. Another incident at Harlow Town allowed engineers to resolve an issue that may have damaged the pantograph equipment on top of passing trains, with each pantograph costing around £25,000. In total, Anglia engineers believe that PANDAS-V has saved passengers an estimated 22,000 minutes of delay within 10 months.

GBR Anglia also took PANDAS-V to the wider region in late August, redeploying a Greater Anglia train equipped with the technology for special runs on the Fen Line. This was intended to speed up the identification of suspected overhead line issues and, whilst no defects were found, the initiative helped to restore Great Northern passenger services more quickly. PANDAS-V is set to be installed on two c2c trains in the coming months, which will enable the lines between Fenchurch Street and Shoeburyness to be covered every day. In the meantime, a Greater Anglia train with the technology will keep operating regularly on the c2c route, with further runs also being planned on the Mildmay line and the Fen Line.

Martin Beable, Chief Operating Officer for GBR Anglia, said: "This initiative is GBR Anglia in action. Being a joined-up railway, with track and train closely aligned, means we are able to embrace innovation and break down barriers more quickly and effectively. The way we've been able to unlock the benefits of innovative technology right across the region shows how integration is already bringing benefits, and there's so much more to come. Together, we're driving down delays and building a better railway for all of our passengers."

Rajdeep Ghatora, Head of Concession for London Overground, said: "We're pleased to see GBR Anglia using innovative technology to support the monitoring and maintenance of railway infrastructure. For London Overground customers, this will help to deliver a more reliable railway, fewer delays and a more resilient network, allowing people to complete their journeys with greater confidence."

As well as monitoring the overhead equipment on the c2c route and Mildmay line over the two Sundays, the train captured front-facing video using its existing cameras. Engineers fed the recordings into software called AIVR which uses artificial intelligence to identify potential future issues on or beside the track.

Across the country, different types of on-board monitoring technology are now being used on various routes, allowing thousands of miles of railway infrastructure to be inspected and analysed every day using regular passenger trains. New developments are continuing to enhance these systems, helping engineers detect potential issues earlier and more accurately.

National Rail

Campaign warns of consequences after railway crime causes nearly 100 days of delays

Trespass, vandalism and cable theft caused more than 2,347 hours of delays – equivalent to 98 days – on Network Rail's North & East route in 2025/26, new figures show.

In response, the rail industry and British Transport Police launched a new campaign on September 29th to crack down on crimes committed by trespassers on the railway. Crime with Consequences highlights to potential offenders that they will face the full force of the law, including severe fines or even prison sentences, if they commit crimes on the railway.

Trespass is one of the railway's biggest causes of disruption and can have a significant impact on train performance, passengers, freight, railway staff and local communities. It can also require a substantial industry response and come at a considerable financial cost.

Network Rail, British Transport Police and the wider rail industry have been working together more closely than ever before. This collaboration is helping the organisations better understand and tackle railway crime, identify offenders and minimise the impact on the railway.

On the North & East route, for the 12 months to March this year, there were:
1,520 trespass incidents resulting in more than 1,920 hours of delays
115 incidents of vandalism or obstruction causing more than 130 hours' delays
35 cable theft incidents leading to more than 293 hours of disruption.
Part of the enhanced collaboration will see improved evidence collection to strengthen prosecutions, as well as a greater focus on victim impact statements to demonstrate the consequences of delays caused by railway crime. Across the network, drones, sensors and smart CCTV are helping Network Rail and British Transport Police identify and catch offenders faster and more consistently.

Karen Duffy, operations director for Network Rail's North & East route, said:"Behind every delay caused by railway crime are passengers who are unable to complete their journeys on time. Trespass, cable theft, vandalism and obstruction are not victimless crimes. They affect the millions of people who rely on the railway every day.

"We're working more closely than ever with our partners across the rail industry and British Transport Police, using technology including drones and security cameras to detect offences more quickly and support investigations. Through the Crime with Consequences campaign, we're making it clear that anyone who breaks the law on the railway can expect to face serious consequences, including fines, criminal convictions and, in the most serious cases, imprisonment. Whatever the reason, trespass is never worth the risk."

Superintendent Darren Malpas, of British Transport Police, said: "This important campaign highlights both the dangers and consequences of criminal activity on the rail network. Those involved must understand that railway infrastructure is extremely dangerous. Anyone trespassing on the railway or attempting to steal cable risks serious injury or death. Through closer collaboration, improved intelligence, new technology and stronger evidence gathering, we're working tirelessly to identify offenders, bring them to justice and protect the communities and passengers who rely on the railway every day."

More comfortable commutes ahead: rail reform spells end of the 'ironing-board' seat era on Thameslink trains

Millions of Thameslink passengers are set to get a more comfortable commute as publicly owned operator GTR partners with Siemens Mobility to upgrade standard class seat cushions across all 115 trains in its fleet from next year.

The new seat cushions have been agreed as part of a pre-existing contract between the operator and Siemens Mobility, meaning the upgrades come at no additional cost to taxpayers.

Over 60,000 new spring and memory foam cushions will be rolled out from next year alongside improved winged backrests, replacing the notorious 'ironing-board' seats that have long frustrated commuters on one of Britain's busiest rail routes. The investment is one of many passenger improvements GTR is bringing in since the operator transferred into public ownership in May. Over £3.6million is being invested in the fleet to revamp exteriors, alongside refreshing onboard facilities including toilets, with new wall vinyls installed to deter graffiti and anti-social behaviour.

Since coming into public ownership, GTR has refreshed just under half of exteriors on its full fleet and nearly 300 train toilet interiors. The timetable is also being boosted and from December double the number of Gatwick Express services will run every hour.

Transport Secretary, Heidi Alexander said: "Just 100 days since GTR's services transferred into public control, we're delivering the improvements commuters have been asking for - this is what public ownership looks like in action.

"From next year, we'll start getting rid of the dreaded 'ironing-board' seats so passengers can enjoy comfier, more pleasant journeys on some of Britain's busiest commuter routes.

"We know fixing Britain's railway is more than a refurb job. We've frozen fares for the first time in 30 years and publicly owned operators have added 76,000 extra seats onto the network. Great British Railways will focus relentlessly on delivering a reliable, modern service that puts a better experience at the heart of everything it does for passengers."

The new design, developed following extensive passenger feedback, offers up to 57% more 'give' than the current seat cushion, with new "wing" backrests for better shoulder and head support. First class seats get the same improved cushions, and seat-back tables are being added to the 69 trains that lack them.

John Whitehurst, CEO of GTR, which operates Thameslink, said: "Today is a brilliant milestone for GTR and our customers. Just 100 days since coming into public ownership, we're showing how listening to passengers can deliver real, practical improvements.

"I'm delighted that passengers have helped us shape this new Thameslink seat cushion and backrest. By testing comfort options with the people who use our trains every day, we've chosen a cushion that will make journeys more comfortable across our network.

"I'm really pleased for our customers and look forward to seeing the new seats come on board from 2027."

Aglaja Schneider, Joint CEO and Managing Director, Rolling Stock and Customer Services at Siemens Mobility UK&I, said: "This project is about more than refurbishment. It is about listening to passengers and making tangible upgrades that enhance comfort on one of Britain's busiest rail networks. By introducing upgraded seat cushions, redesigned backrests and new seat back tables across the Class 700 fleet, we are improving the experience of the millions of people who rely on Thameslink services every year.

"I'm proud of our Siemens Mobility teams who maintain this fleet and keep passengers moving every day. This investment reflects our commitment to a modern railway focused on the passenger, and we look forward to seeing these enhancements make a real difference to journeys across the network."

Installation of the new cushions and tables begins in 2027 and will be phased over two years to avoid disrupting services, as part of an 11-year fleet overhaul delivered with Siemens.

National Rail

New details announced for multi-million-pound investment to boost reliability of North Wales Coast railway

This once-in-a-generation programme will deliver years' worth of improvements during a four-week railway closure in January 2027.

More than £25m will be invested in the North Wales Coast railway in January 2027, as Network Rail delivers a major programme of improvements to boost reliability, capacity and safety on this vital passenger and freight route.

The once-in-a-generation programme will see engineers working at locations across the railway between Chester and Holyhead, renewing track and other infrastructure - some of which has been in place for more than 50 years.

To allow this huge package of work to be delivered safely and efficiently, the North Wales Coast line will close for four weeks from Saturday January 9th until Saturday February 6th 2027.

For the first three weeks, the railway will be closed between Chester and Holyhead, including the Conwy Valley line and Llandudno Junction to Llandudno. During the fourth week, the closure will reduce to between Llandudno Junction and Holyhead.

Network Rail has worked with its engineering teams to reduce the closure between Chester and Llandudno Junction from four weeks to three, and is continuing to work with its industry partners to reduce the impact of disruption for passengers and communities.

Rail replacement services will operate during the closure, with detailed travel arrangements expected to be confirmed in autumn 2026.

The £25m investment includes:

Renewing track through the Grade I-listed Conwy Tubular Railway Bridge, where the existing track dates back to 1978.
Major track and drainage improvements in Bodorgan Tunnel, replacing infrastructure dating back to 1972 and helping reduce the risk of flooding.
Track renewal and ground improvements at Penmaenbach, where sections of track were last renewed in 1986.
Track and points improvements at Holyhead and Llandudno.
Platform improvements at Llandudno Junction.
Work at four level crossings, east of Bangor.
Around £1.4m of vegetation management across nine locations, alongside extensive maintenance throughout the route.
Two new fully accessible footbridges at Prestatyn and Abergele, supporting the closure of four high-risk level crossings.

The work will be delivered by rail using 22 engineering trains and specialist on-track machinery, bringing in more than 3,000 concrete sleepers and 9,000 tonnes of ballast, while around 9,800 tonnes of spoil will be removed for recycling and reuse on future railway projects.

The investment builds on the introduction of the new North Wales timetable in May 2026, which delivered a 50% increase in Transport for Wales services - the biggest timetable improvement in North Wales for a generation.

With more trains now using the railway, the January closure will also allow Network Rail teams to carry out additional maintenance alongside the major renewals. Completing this large amount of complex work in one four-week programme will reduce the need for repeated weekend closures over the months and years ahead, minimising disruption for passengers, residents and local businesses.

Emma Osborn, Passenger Strategy Director at Network Rail Wales and Borders route, said: "This is a once-in-a-generation investment in the North Wales Coast railway and a huge opportunity to renew and improve infrastructure right across this vital route.

"Investment on this scale inevitably means some temporary disruption while we carry out the work, and we recognise closing the railway will have an impact on customers and communities.

"But by bringing years' worth of complex work together into one intensive programme, we can deliver it more safely and efficiently, while avoiding a prolonged series of disruptive weekend closures.

"The long-term benefits for passengers and freight customers will far outweigh this temporary disruption, with a safer, more reliable railway that is better equipped to support the increased number of services now running across North Wales.

"We're working closely with Transport for Wales and Avanti West Coast to keep passengers moving and we thank everyone in advance for their patience while we deliver this major investment."

Colin Lea, Planning & Performance Director for Transport for Wales said: "As we see passenger numbers and service frequencies across North Wales grow, working alongside our partners at Network Rail is essential to ensure our infrastructure can support that demand.

"Essential track maintenance, tunnel drainage, and new accessible footbridges will help deliver a more reliable service and better stations for the communities we serve.

"We know railway closures are disruptive to our passengers, and we appreciate their patience. We remain committed to keeping North Wales moving throughout January, and full details on alternative travel arrangements will be shared this Autumn."

Chris Liptrot, Operations Director at Avanti West Coast, said: "While Network Rail carries out these improvements, there will be changes to services on our North Wales route.

"We are working closely with Network Rail and our industry partners to ensure customers are kept informed about how their journeys may be affected. Once the timetable has been confirmed, customers planning to travel during this period are advised to check the Avanti West Coast and National Rail Enquiries websites for the latest travel information."

Class 66 063 plus LNER A1 No. 60163 'Tornado' along with Mk1 BSK No. 21249 pass Daisy Dell footbridge, Andover on September 10th, whilst heading to Swanage for their Autumn Steam Gala.
David Lindsell

Schools lined up to take lessons in unique signal box classroom

Schools across Lancashire are being invited to hold lessons in Britain's quirkiest new classroom – a former railway signal box on the West Coast Main Line.

The decommissioned building at Hest Bank on Morecambe Bay is now a 'first-of-a-kind' community space to inspire and teach schoolchildren Science, Technology, Engineering and Maths (STEM) subjects relating to not only the railway but also the bay.

The London Midland Type 15 box, built by British Railways and opened in December 1958, closed in 2013 with signalling control diverted to Preston Power Signal Box.

It had been standing empty until some thinking 'outside the box' by Network Rail, its Community Rail and train operator partners*, who between them secured the £14,000 needed for a unique and clever conversion.

Now known as the 'Box on the Bay' – it's been taken over by the Leeds-Morecombe Community Rail Partnership - which will run educational sessions for schools across Lancashire.

It completes a three-year-project to breathe new life into a piece of railway heritage in the famous and only location where West Coast Main Line tracks actually run directly beside the sea.

The first children to take advantage of the new facility were ten Year 5 students from Heysham Saint Peter's Church of England Primary over the summer.

Now students are settled back into lessons after the summer break, the centre is available for bookings for other schools who are interested in making use of the unusual educational setting.

Amelia Routledge, Network Rail Infrastructure Maintenance Delivery Manager, said: "It's brilliant to see a bright future for this signal box when the alternative was demolition and this piece of railway heritage being lost. The fact it is now inspiring the next generation of future engineers and getting them engaged and excited about about STEM subjects is even better.

"This project has been a huge collaboration across the industry with Network Rail, the Community partnerships, the Leeds to Morecambe Community Group, Avanti West Coast, Transpennine Express, and Northern all involved - either through funding, support or ideas - and working together to make it happen."

Brian Haworth, Leeds to Morecambe Community Rail Partnership officer, said: "This now opens us up to a totally different way of engaging young people, where rather than going into schools to teach we can bring them to the railway itself. You can actually see level crossings work, you can see the sequence that they have to go through and we can explain how you have to use them and stay safe. And when you see a train coming past the window every few minutes at a hundred miles an hour, it's the perfect safety lesson, right where it's actually happening!"

*The project was funded in partnership with Network Rail, Leeds-Morecombe Community Rail Partnership, Avanti West Coast, Transpennine Express and Northern.

National Rail

LESS THAN ONE MONTH TO GO: October half-term railway upgrades between Staines and Windsor

Engineering work takes place between Monday October 26th and Sunday November 1st affecting train services in the Staines, Windsor, Hounslow, Feltham and Virginia Water areas Bridge and track upgrades form part of wider plan to reduce delays and improve reliability between London Waterloo, Staines and Windsor & Eton Riverside Customers should plan their journeys carefully as buses will replace trains

Improvements are coming for South Western Railway's (SWR) route between Staines and Windsor this October.

During the October half-term, from Monday October 26th to Sunday November 1st , engineers will carry out essential track and bridge maintenance work between Staines and Windsor & Eton Riverside, as part of ongoing investment in railway infrastructure to improve reliability and resilience for customers across the network.

Buses will replace trains between Monday October 26th and Sunday November 1st, and customers should plan their journeys carefully - full details can be found below.

At a bridge between Staines and Wraysbury, engineers will be replacing 28 wheel timbers, the wooden blocks that support passing trains, to ensure trains can continue to travel safely at full speed, helping keep services running on time.

In Windsor, engineers will replace 30 long timbers, wooden blocks that support multiple tracks, on the approach to Windsor & Eton Riverside station. The new timbers will support the more than 70 train services that use the station every weekday and improve the railway's long-term resilience.

Engineers will also renew the switches and crossings near Staines station, where there is an important entry point for trains to enter service.

To carry out all of these improvements, the following service changes will apply:

Monday October 26th to Sunday November 1st – buses will replace trains between Staines and Windsor & Eton Riverside

Saturday October 31st to Sunday November 1st – buses will replace trains between Hounslow, Feltham and Virginia Water, and Feltham station will be closed on Sunday.

The work follows SWR and Network Rail Wessex's plan to improve reliability across the network, including a £15 million investment in track and signalling improvements for the busy corridor between London Waterloo and Woking, targeting some of the most common causes of delays. Services between London Waterloo and Windsor & Eton Riverside join this corridor at Queenstown Road (Battersea), where further improvements are being delivered to support more reliable journeys.

Thomas Desmond, Operations Director for South Western Railway and Network Rail Wessex, said:
"These upgrades represent an important investment into the railway's future, improving reliability, reducing the likelihood of disruption and ensuring that we continue to provide a safe and dependable service for our customers.

"We're thankful to our customers for their patience while we carry out these essential works over the October half- term. We recommend customers visit our website to check their journey before travelling."

What this means for your journey

Monday October 26th to Friday 30th

Services between Staines and Windsor will be diverted.

Two buses per hour will run between Staines and Windsor & Eton Riverside, calling at Wraysbury, Sunnymeads, and Datchet.

Saturday October 31st

Services between London Waterloo and Reading will be diverted.

Services between London Waterloo and Weybridge will finish their journeys at Hounslow.

Two buses per hour will run between Hounslow and Virginia Water, calling at Feltham, Staines and Egham.

Two buses per hour will run between Hounslow and Virginia Water, calling at Feltham, Ashford, Staines and Egham.

Two stopping buses per hour will run between Hounslow and Windsor & Eton Riverside, calling at Feltham, Ashford, Staines, Wraysbury, Sunnymeads, and Datchet.

Two fast buses per hour will run between Feltham and Windsor & Eton Riverside, calling at Staines.

Sunday November 1st

Services between London Waterloo and Reading will be diverted.

Services between London Waterloo and Woking will finish their journeys at Hounslow.

The afternoon services between London Waterloo and Kingston will finish their journeys at Hounslow.

Two buses per hour will run between Hounslow and Virginia Water, calling at Feltham, Staines and Egham.

An hourly bus will run between Hounslow and Windsor & Eton Riverside, calling at, Ashford, Staines and Datchet.

Major railway upgrade means no trains to or from Birmingham New Street this Christmas

Passengers are being warned of major Christmas engineering work at Birmingham New Street which will mean no train services to or from the station from December 24th to 28th.

Network Rail will begin a £13m upgrade of the overhead power lines - which keep electric trains on the move - on the approaches to and through the station as part of a long-term plan to improve reliability.

From Thursday December 24th to Monday December 28th 2026, engineers will renew complex sections of the wiring, much of which dates back to the 1960s.

The Christmas 2026 work is the first phase of a three-year programme, with further work taking place over the Christmas period in 2027 and 2028.

Network Rail, train operators and transport partners are working closely together to minimise the impact as much as possible so passengers can make their planned journeys - but the extent and scale of the work means journeys will take longer and may involve dedicated rail-replacement buses or using the local bus network.

Martin Colmey, route director for Network Rail Central route, said: "Birmingham New Street is at the heart of the rail network, supporting millions of local, regional and national journeys every year.

"Much of the overhead line equipment dates back to the 1960s and needs to be replaced. This £13m investment has been carefully planned to make the railway more reliable.

"There is never a good time for this type of work and we have done all we can to reduce its impact as much as possible. Christmas is a quieter time but we know it will affect journeys at an important time of the year.

"We want to make people aware as early as possible so they can plan ahead. As soon as tickets are available to buy for Christmas travel, there will be clear, detailed information to help passengers plan their journeys and make informed decisions."

Birmingham New Street station plays an important role in how people move around the city centre, so the station building will remain open during the engineering work, allowing people to continue accessing shops, including Grand Central, and the wider city centre. Facilities in the station, including the assisted travel lounge and toilets, will remain open, and there will be staff on hand every day to provide help and assistance to those who need it.

More information about alternative travel options, journey times, rail-replacement buses and advice on using other transport providers will be shared at www.nationalrail.co.uk/newstreetclosure as soon as plans are finalised. Timetables for Christmas travel will be confirmed and made available online from early October.

National Rail

Nine-day closure of Hertford East branch line for vital works following 2025 flood

This October, railway engineers will be replacing 1km of track in Hertfordshire that was severely flooded last year, helping to keep trains running safely and reliably for years to come. These major works mean that there will be no trains from Hertford East, Ware, St Margarets and Rye House stations for nine straight days between Saturday October 17th and Sunday October 25th. A burst Thames Water sewer pipe flooded the tracks through Rye House station in December 2025, closing the line for nearly a week while teams got control of the flooding and carried out a full clean-up operation. Some repairs were made to the railway infrastructure at the time, but extensive work is now needed so the route is fit for the future. Engineers will be completely replacing 1km of rails, sleepers and ballast (the stones underneath the track). The new track is expected to last for more than half a century. At the same time as the track replacement is taking place, engineers will use the opportunity to finish upgrading platform 1 at St Margarets station. Following ground stabilisation works earlier this year, the platform structure will be repaired during the October closure, followed by full resurfacing to help keep everyone's journeys safe, smooth and accessible.

Martin Beable, Chief Operating Officer for GBR Anglia, said: "It's essential that we replace the track through Rye House station following last year's major floods on our infrastructure. There's never a good time to close the railway, especially for an extended period like this, but this is a big job that we must get done to keep providing the best possible service on the Hertford East branch. We're really sorry for the disruption, and advise that passengers start planning ahead if possible."

GBR Anglia brings c2c, Greater Anglia and Network Rail Anglia together under a single unified structure on the journey to Great British Railways. The three organisations are increasingly planning and delivering as one railway, enabling faster and more joined up decision-making.

During the first weekend of the Hertford East line works, Saturday and Sunday October 17th/18th October, vital maintenance will additionally be taking place:
On the main line between London Liverpool Street and Stansted Airport / Cambridge
On the London Overground Weaver line between London Liverpool Street and Cheshunt

Teams will be delivering a range of upgrade works on these routes, including improving platforms at Cheshunt and Stansted Mountfitchet stations. Journeys on Greater Anglia, Stansted Express and the Weaver line will be affected as below. Passengers should check before they travel at greateranglia.co.uk, stanstedexpress.com or tfl.gov.uk

Leaf it to us: Scotland's railway gets a grip on autumn

Network Rail is beginning its annual autumn operation across Scotland to help keep trains running reliably during the railway's most challenging time of year.

Every autumn, millions of leaves fall onto the tracks. As trains pass over them, they're crushed into a slippery layer, drastically reducing the grip needed for trains to brake and accelerate. The result can be delays, disruption and longer journey times for passengers.

Months of planning go into preparing Scotland's railway for the season, with specialist teams, eight treatment trains and innovative technology deployed across the network to minimise the impact on services. This year, more than 80,000 miles of track will be treated in 370 circuits, using 155 tonnes of sand to improve grip.

The action is delivering positive results, with delays attributed to autumn falling by more than a quarter last year compared with the previous autumn. However, despite these improvements, autumn-related delays still cost the railway around £1m each year, underlining the scale of the challenge to keep passengers moving.

Heather Waugh, customer driver for Lumo, sees firsthand the challenges autumn can bring to the railway. She said: "Autumn can completely change how the railway feels. You can approach the same stretch of track you've driven hundreds of times before and find conditions are completely different from one day to the next. For drivers, it's often described as the railway's equivalent of black ice on the roads.

"As drivers, we have to stay alert, adjust how we drive and think ahead. The work that happens behind the scenes to treat the track and prepare the railway for autumn makes a huge difference. It gives us the best possible conditions to operate safely and helps passengers get where they need to be."

This year's autumn operation includes the introduction of new technology and equipment designed to improve reliability and reduce delays for passengers.

ScotRail's Class 158 trains, which run on many routes across Scotland including the Highlands and northeast, will be fitted with sanders for the first time to improve grip between train wheels and the track. The £7.7m rollout of Double Variable Rate Sanding (DVS) technology will also be completed, which automatically adjusts the amount of sand applied according to the train's speed.

A new sand rover vehicle will be introduced on the Far North Line to apply a specialist gel treatment to the track, improving grip and helping reduce delays.

Alongside these measures, teams across Scotland will carry out targeted vegetation clearance and drainage maintenance.

Craig Milne, operations director at Network Rail Scotland, said: "Autumn is a challenge we know is coming every year, but that doesn't make it any less demanding. It has the potential to affect train services on a scale that no other season does.

"We've learned a lot about managing the impact and we've become much better at it, but success is never guaranteed. The work we do over the next few months is crucial to keeping Scotland moving and minimising the impact of autumn on the people who depend on the railway every day."

Mark Ilderton, ScotRail Service delivery director, said: "Autumn is always one of the most challenging periods of the year for the railway, and a huge amount of preparation goes into reducing the impact on our customers.

"We've been working round the clock to prepare our trains and our stations for the change in weather, while working with colleagues at Network Rail to keep rails and train wheels clean.

"Leaves on the line can create conditions similar to black ice on the roads, so safety has to come first. The investment in new sanding technology, alongside the work taking place across the network and at our depots, will help us keep trains moving safely and reliably.

"We're also making some minor changes to a small number of services to keep the timetable running as smoothly as possible. We'll continue to keep customers updated throughout the autumn and would encourage everyone to check their journey before travelling through the ScotRail app or website."

National Rail

Direct Rail Services' state-of-the-art ETCS rail simulators launch

Nuclear Transport Solutions' (NTS) rail division, Direct Rail Services (DRS), has strengthened its commitment to operational excellence with the arrival of cutting-edge driver training simulators. The new simulators will play a key role in preparing DRS drivers for the rollout of the European Train Control System (ETCS) across the UK's rail network, equipping them with the skills and experience needed to operate safely and confidently on the next generation of digital railway signalling.

ETCS is a digital in-cab signalling system that replaces traditional lineside signals, helping to improve safety, reliability and network capacity. ETCS has already been introduced on the East Coast Main Line through the East Coast Digital Programme (ECDP). Located in DRS's office at Regents Court, Carlisle, the simulators accurately replicate real-world driving conditions and ETCS operations. A 'virtual cab' simulator and a number of desktop simulators were installed, allowing drivers to experience a range of scenarios in a controlled setting. The technology enables drivers to build familiarity with ETCS systems, practise responses to operational situations and enhance decision-making skills without impacting live railway operations.

Tony Hewitson, Rail Director at NTS, said: "The introduction of these new ETCS training simulators marks a significant milestone for DRS and demonstrates our commitment to training excellence and the future of the railway. As digital signalling technology becomes more widely adopted across the network, it is essential that our drivers have access to the highest standards of training. This simulator provides a realistic and engaging environment that helps develop competence, confidence and operational readiness while maintaining our unwavering focus on safety."

The simulators were funded by Network Rail as part of the rollout of the ETCS system and offer much greater training opportunities compared with those available in a live rail environment.

Chris Hobden, Programme Director (ECDP), Network Rail, said: Making a successful switch to digital signalling is about people as much as the technology involved. Network Rail is investing in these facilities to ensure drivers have both the competence and confidence to drive in ETCS. Digital signalling will provide a safer, more capable and more reliable railway for rail freight, supporting its growth and contribution to our economy and environment."

The simulators were designed and delivered by CORYS, a French specialist in high-fidelity train driving simulation technology and a long-standing supplier to the UK rail industry.

John Madden, Commercial Director at CORYS, said: "CORYS is proud to support DRS's ETCS driver training as part of the East Coast Digital Programme. The DRS simulators benefit from the latest UK ETCS platform, built with UK freight and passenger operators since 2018 and continuously updated as the real system evolves. Working in partnership with the DRS team has been a genuine pleasure, and their Carlisle training facility is state-of-the-art. We look forward to supporting the wider ETCS rollout as it extends across the network."

The simulators form part of DRS's wider training and development programme, ensuring employees have access to the skills and technologies needed to support the evolving needs of customers and the rail industry.

Dale Howcroft, DRS ETCS Operations Specialist, added: "This simulator gives our drivers the opportunity to gain hands-on experience with ETCS in a safe and controlled environment. It allows us to recreate a wide range of scenarios and support consistent, high-quality training that will benefit both our people and our customers."

£9m rail upgrade planned for Inverness station and Kyle line

Engineers are set to carry out £9m of upgrades and repairs on the Kyle line and at Inverness station later this year, with the railway closing between Dingwall and Kyle of Lochalsh for three weeks.

The route, which links communities across the Highlands and attracts thousands of visitors each year, will shut to allow a large amount of work to be completed in one go.

The investment is aimed at keeping the railway in good condition and ensuring it continues to provide a reliable service for passengers travelling across the Highlands.

During the three-week closure, a range of renewals, repairs and other maintenance activities will take place:

At Inverness station, engineers will renew track and sleepers at platforms 5 and 6 and refurbish equipment that allows trains to move between different tracks, helping to improve reliability and keep services running smoothly.

Around 7km of track will be renewed at several locations, including between Welsh's Bridge and Rose Street level crossing in Inverness, Achanalt and Rosebank near Achnasheen, and between Strathcarron and Stromeferry, providing a smoother and more dependable railway for passengers.

Drainage improvements will be carried out through the renewal of several culverts between Dingwall, Achnasheen and Stromeferry, helping to reduce the impact of adverse weather on the railway.

Structural repairs and track renewal work will take place at multiple railway bridges, including Carron Viaduct, helping to maintain a safe and reliable railway for years to come. To allow the work to be carried out safely and efficiently, no trains will run between Dingwall and Kyle of Lochalsh from Saturday November 28th to Friday December 18th inclusive, with services resuming on Saturday December 19th.

Network Rail and train operators are working together to support local communities and passengers.

Gerry McQuade, capital delivery director at Network Rail Scotland, said: "The Kyle line is one of Scotland's most scenic and important routes, connecting communities across the Highlands. This £9m investment will allow us to carry out a significant amount of work in a short period of time, helping us keep the railway safe, reliable and resilient for the future.

"We know that closing the line will cause disruption and we're sorry for the inconvenience. By bringing together a wide range of upgrades and repairs during one closure, we can complete this work as efficiently as possible and reduce the need for future unplanned disruption. We'd like to thank passengers, communities and businesses along the route for their patience and understanding while we deliver these essential improvements."

Mark Ilderton, ScotRail Service Delivery Director, said: "When our colleagues at Network Rail deliver this project to improve the long-term reliability of the railway between Inverness and Kyle of Lochalsh, our priority will be to keep customers moving and ensuring they can continue to travel with confidence.

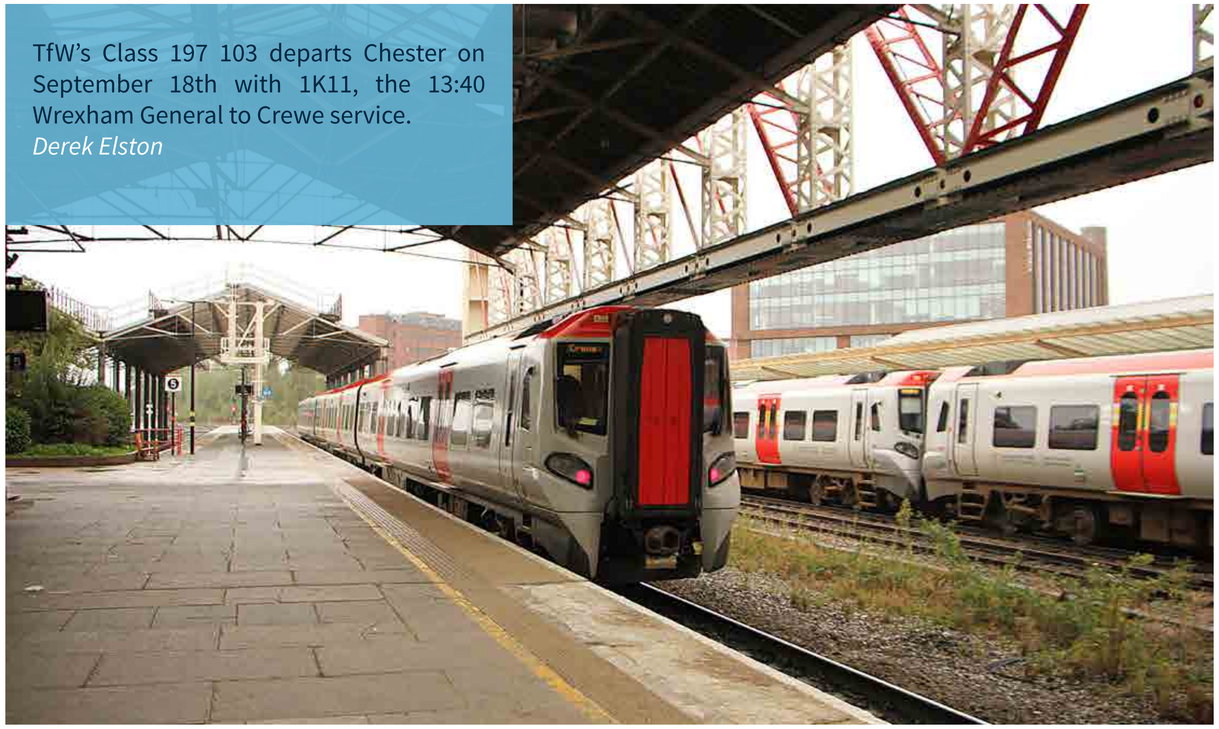

"We know how important the Kyle line is to the communities it serves, so we'll have a rail replacement plan in place to ensure customers can still travel reliably throughout the works.

"We're grateful to customers for their patience and understanding when this vital work takes place and look forward to welcoming them back on the line when the work is complete."

First of ten new Alstom Aventra trains for the Elizabeth line enters passenger service in the UK

On September 1st, the first of ten new Derby-built Class 345 Aventra Elizabeth line trains began passenger service in London, following an extensive period of testing on the mainline railway by Alstom, Transport for London and the operator GTS.

The new trains, delivered with Government funding, will support increased passenger demand, including at High Speed Two's (HS2's) Old Oak Common railway station when it opens.

The electric multiple units (EMUs) are being built at Alstom's historic Derby Litchurch Lane Works, with the train manufacturer's supply chain supporting almost 40 companies across the UK – totalling more than 1,000 employees.

Each nine-carriage Elizabeth line train contains five miles of welding, 50 miles of cabling, and more than 47,700 screws and 31,700 bolts.

"Seeing the first of the additional ten Elizabeth line units enter passenger service is a special moment for everyone involved at our Derby site – as well as all those across the country involved in their creation," said Nimesh Tailor, Project Director Elizabeth line + at Alstom.

He added: "I am incredibly proud of what the team in Derby has achieved, and know their commitment to deliver the remaining nine trains will continue with the same rigour, passion and dedication. This milestone once again demonstrates Derby's capability to deliver complex and high-quality rolling stock projects that benefit passengers and local economies across the UK and around the world." Class 345 Aventra No. 345071 was accepted by the customer on Tuesday August 25th and began passenger service within the same week.

Celebrating its 150th birthday this year, Derby Litchurch Lane Works is Alstom's largest global facility, and the UK's only train factory able to design, engineer, build and test trains for domestic and export markets.

The site delivered more than 2,660 Aventra carriages for UK train operators between 2017 and 2024. Following Aventra's success, Litchurch Lane is now a Centre of Excellence and Alstom's global hub for the new-generation Adessia train platform.

Alstom™ and Adessia™ are protected trademarks of the Alstom Group.

Alstom's Morden Traincare Centre celebrates 100 years at the heart of the Northern line in London, UK

Alstom, global leader in smart and sustainable mobility, has welcomed colleagues' families, partners and local stakeholders to its Morden Traincare Centre in South London to mark 100 years since the opening of the Northern line's almost eight-mile (12.3 km) extension from Clapham Common to Morden.

The family and friends event on Sunday September 13th celebrated a century of transport history, as well as the Alstom team who continue to keep one of London's busiest Underground lines moving safely and reliably every day. Guests were invited to tour the depot, meet the people behind Alstom's operations and view a specially-commissioned exhibition, 'Morden 100: Portraits from the Northern line', created by photographer Nick Robinson. On 13 September 1926, the Northern line was extended from Clapham Common to Morden, with seven new stations opening at Clapham South, Balham, Tooting Bec, Tooting Broadway, Colliers Wood, South Wimbledon and Morden, alongside Morden Traincare Centre.

A century later, Morden remains a vital part of London's transport network and, together with Golders Green Traincare Centre, forms the engineering core of the line. A large timeline charting key moments in the Northern line's history was also unveiled at the depot during the Morden 100 event.

Alstom maintains the Northern line's fleet of 106 1995 Stock trains from its Morden and Golders Green Traincare Centres. The Alstom-built fleet entered passenger service in 1998 and continues to serve millions of Londoners and visitors using the Underground each year.

"Today is a celebration of a place, a milestone and, above all, our people. For 100 years, Morden Traincare Centre has played a vital role in keeping the Northern line moving. The London Underground has changed enormously since 1926, but the dedication, skill and professionalism of the people who care for this fleet remain at the heart of everything we do," said Rob Whyte, Managing Director UK at Alstom.

He added: "We are proud to celebrate this centenary with our colleagues, partners and stakeholders, and to recognise the contribution that Morden and Golders Green continue to make to London's transport network." The Alstom team working on the Northern line comprises almost 250 employees across two depots, representing 20 nationalities. With an average tenure of 14 years, the workforce includes colleagues who have been with the Northern line for nearly five decades – the longest-serving having joined in 1977. The centenary event also highlighted the skills, commitment and pride of Alstom colleagues working behind the scenes across the Northern line. Through Nick Robinson's enlarged prints, 'Morden 100: Portraits from the Northern line' offers a rare glimpse inside the depots, and recognises the maintainers, technicians, engineers and support teams whose work keeps trains safe, reliable and ready for service.

Those featured include brothers Abayomi Shittu, Train Maintainer and Murphy Shittu, Golders Green Depot Manager. Originally from Nigeria, they moved to the UK in 2004 and 1999 respectively and both continue to work together on the Northern line. Meanwhile, another photograph features four Alstom colleagues who have dedicated almost 170 years of service to the Northern line between them.

Elsewhere, love is certainly in the air on the Northern line, as Georgi Georgiev, Production Manager, and Desislava Manushkova, Purchasing Controller, have been married since 2008, while two father and son duos feature in the exhibition.

"The Northern line extension to Morden transformed travel in south London and introduced a collection of stations that remain some of the most recognisable and admired on the Underground network. As we celebrate their centenary, we're delighted that Alstom have joined us in celebrating the history, architecture and stories behind these remarkable buildings," said Ann Gavaghan, Customer Experience Manager at Transport for London. The Morden 100 celebration forms part of Alstom's wider recognition of the Northern line's history, from the opening of the world's first electric deep-level tube railway in 1890 to the modern operation of one of London Underground's most important routes. Around one million passengers travel on the Northern line every weekday, with the line today serving 52 stations across 38 miles (61 km) of track.

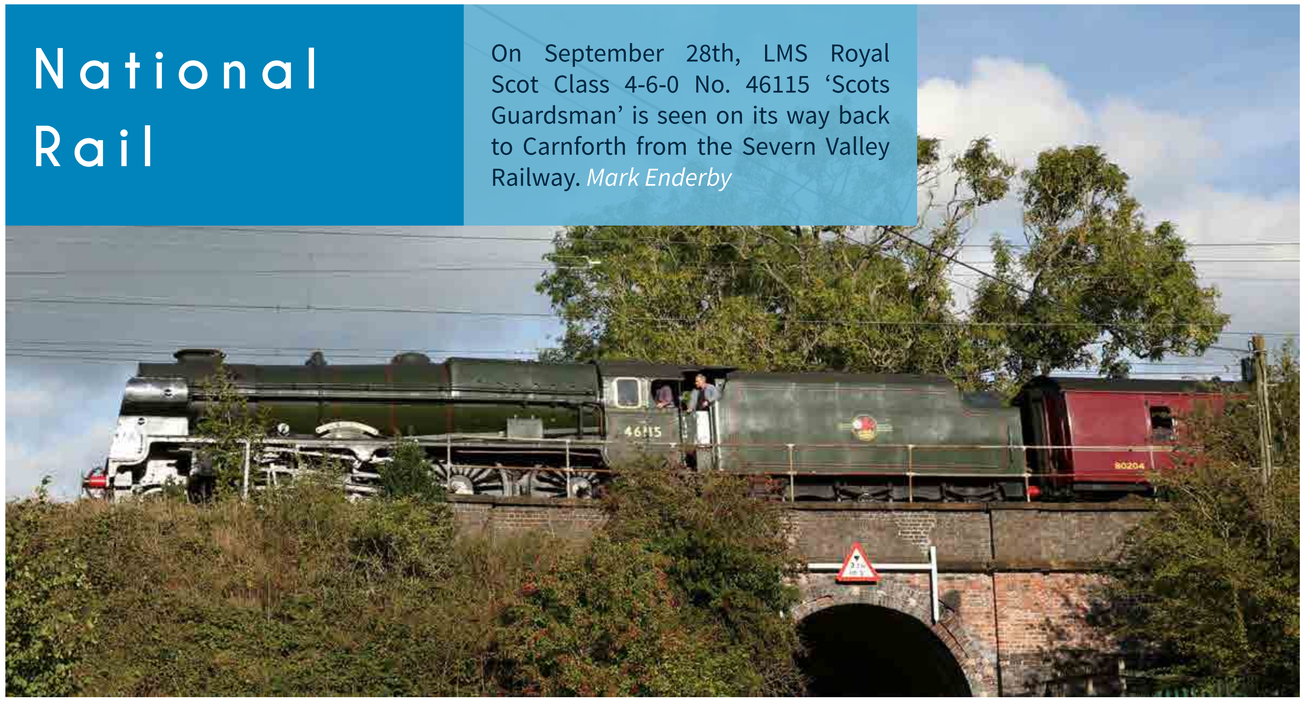

Alstom took over the contract to maintain the Northern line rolling stock in 1995, and has since delivered major reliability, refurbishment and improvement programmes for its fleet – which travels around 9.3 million miles (15 million km) a year.

As part of the Morden 100 celebrations, visitors witnessed a full vehicle (six-car train) being raised by lifting jacks and saw how the depot's Lean-Lift system operates within the Stores department. In addition, Alstom STEM (Science, Technology, Engineering and Mathematics) Ambassadors led family-friendly, hands-on activities designed to inspire the next generation of rail professionals.

A miniature, ride-on railway visited the depot for the day from There and Back Light Railway as well as displays from London Transport Museum and Tooting History Group, along with local food and drink vendors. Morden 100 marked the first time in almost four decades that the site has held an open day. Activities and donations arranged by the Branch Line Society and Tooting History Group helped raise over £1,600 for Morden Traincare Centre's chosen charity, Caring Kits for Kids.

Photo: Visitors to Alstom's Morden 100 Family and Friends Day witnessed a full six-car London Underground train being raised by lifting jacks. ©Nick Robinson)

On September 28th, LMS Royal Scot Class 4-6-0 No. 46115 ‘Scots Guardsman’ is seen on its way back to Carnforth from the Severn Valley Railway. *Mark Enderby*

Network Rail sheep-grazing project bears fruit for Perth food bank

An orchard uncovered in Network Rail’s recent sheep-grazing biodiversity project is helping feed local families, with volunteers gathering hundreds of pieces of fruit for Perth and Kinross Foodbank. In May this year, Network Rail brought 25 sheep to the lineside site which had become overgrown with dense vegetation including giant hogweed. The sheep offered a natural approach to control invasive plant species and improve the environment, all without the use of herbicides. In just a few short months the hungry sheep have transformed the space and revealed a long-hidden orchard that has produced a bumper harvest this season. With the orchard enjoying one of its most bah-rilliant seasons in recent years, Network Rail staff rolled up their sleeves and volunteered to gather the fruit which includes apples, pears, plums and damsons from the site. The harvest, amounting to hundreds of pieces of fruit, has been donated to Perth and Kinross Foodbank and site neighbours Willowgate Activity Centre, turning the biodiversity project’s success into a direct benefit for the local community. Support for the fruit-picking effort came from local farming business JDW Agri, which donated 200 collection boxes and has cared for the sheep since their arrival earlier this year.

Mark Allan, track maintenance engineer at Network Rail Scotland, said: “When we introduced the sheep to this site earlier this year, we knew there was an orchard hidden among the vegetation, but it’s been fantastic to see just how much it has flourished. This project is a great example of the wider benefits that can come from working with nature. Not only have the sheep helped us manage the land in a more sustainable way, they’ve also helped create an opportunity to support the local community through this donation.”

James Morrison, head of sustainability and social value at Network Rail Scotland, said: “It was brilliant to see colleagues come together to harvest the fruit and make sure it could benefit local people. The transformation of the site over the last few months has been remarkable. What was once difficult to access has become a thriving green space, and it’s incredibly rewarding to know the fruit will be enjoyed by people across Perth and Kinross.”
Lori Hughes, foodbank manager at Perth and Kinross Foodbank, said: “We are really excited to receive this donation of fresh fruit from Network Rail. Locally grown produce is not something we often have available for our clients, despite it being something many people ask for.
We greatly value our relationship with Network Rail and are very grateful to benefit from colleagues giving their time to volunteer in this way. Their efforts mean fresh, nutritious food can reach people across Perth and Kinross who need it most. It’s fantastic to see the fruits of this environmental project being shared with the local community.”

Did you Know - *Ken Mumford*

Some more of the nations oddities this month:
What happened after the Menai Bridge disaster in 1970

SOME STRANDED ON ANGELSEY after May 23rd 1970

Brush Type 4	Nos 1724, 1851 and 1940
EE class 40s	219/31/2/3/41, 307 and 390

These locos were shipped from Holyhead to Barrow-in-Furness

Their bodies were removed at Valley station, near Holyhead
and conveyed to Holyhead harbour using Pickford Limited
road vehicles for loading in Holyhead harbour
At the harbour the Central Electricity Board's crane
was used to transfer the loco bodies onto the
2,000 ton *Kingsnorth Fisher*owned by Fisher's of Barrow-in-Furness.
After a 10-12 hour sea voyage, the locos were unloaded at
Vickers-Armstrong quay, Buccleuch Dock
Their bogies travelled by rail and were also loaded
aboard the *Kingsnorth Fisher* - a modern vessel
specially constructed to handle heavy indivisible loads

At the same time freight and selected passenger vehicles were taken
by road on Pickfords low loading trailers to Menai Bridge station
on the mainland side of the damaged bridge; here they were re-railed.

BR/Sulzer Type 2 Nos 5034/44/83 were also stranded at Holyhead
but 5044 was shipped back to the mainland with the Type 4s above.
However 5034/83 plus dmu cars 50404 and 56167
and shunters Nos 304, 3175 and 4137 were left behind at Holyhead.

North Wales coast line trains terminated at Bangor,
passengers then travelled to Llanfair PG for a dmu connection to Holyhead

Boat trains ran to and from Heysham.

Freighliners were diverted to Caernarvon. Containers were then transferred
to Holyhead for transfer to container ships for the crossing to Ireland.

A Different View

SWR ‘Arterio’ Class 701 035 is seen pulling away from Chessington South station on September 22nd, forming the 2M48 service to London Waterloo. Meanwhile, DC Rail Freight’s Class 60 099 ‘Ben Mor Assynt’ sits patiently at a ‘red’, waiting for the signalling centre at Basingstoke to set the road, allowing access to Chessington South Sidings. *Ian Callander*

A Different View

Preserved Railways

GRESLEY CLASS N2 No. 1744 RETURNS TO TRAFFIC AND STARS AT NORTH NORFOLK 1940s WEEKEND

The Gresley Society is delighted to report that its class N2 No. 1744, Sir Nigel Gresley's oldest surviving locomotive, has returned to traffic after running repairs and took a starring role at the North Norfolk Railway's Steam Back to the Forties weekend on September 19th and 20th.

No. 1744, the only remaining Gresley tank engine, re-entered service on the North Norfolk Railway in July 2026 after an eight-year overhaul costing around £800,000. In mid-September a vacuum-brake fault and a broken spring required further attention at the Railway's Weybourne Works before the locomotive could be rostered with confidence.

Keith Ashford C.Eng MIMechE, the Society's Locomotive Manager, oversaw a concentrated week of work. The repaired spring was refitted and checked with the engine over the pit. Apprentices steamed the locomotive for static brake testing after the vacuum chamber was found to drop as train-pipe vacuum was reduced during a brake application. The engine was then connected to an electrically driven vacuum test pump, borrowed from the Carriage and Wagon Department, so that the chamber and train-pipe systems could be charged and a series of application tests carried out.

Measurements of vacuum brake cylinder piston travel and brake pull-rod travel pointed to the adjustment of the brake rigging, and the clearance between the brake blocks and the tyre treads, as critical to the chamber's behaviour. Yard steaming followed, together with an examination of the small ejector. Further in-steam tests were then carried out with Alex Harper-Bourne.

No. 1744 was driven to Sheringham and coupled to empty coaching stock. Three return trips were made with a load of four vehicles, after which the brakes were performing quite acceptably. The locomotive worked the scheduled public passenger service on Thursday 17 September and was then available for 'Steam Back to the Forties'.

The North Norfolk Railway advertised an all-steam line-up of five locomotives for the weekend: WD No. 90775, GWR No. 4277 Hercules, Hunslet tank engines No. 22 and Newstead, and GNR class N2 No. 1744. The event, held with the wider Sheringham 1940s celebrations, was attended by over 6,200 visitors and featured an intensive steam service between Sheringham and Holt, live music, vintage vehicles and wartime displays at the line's stations.

Successful running also helps the Society to repay the North Norfolk Railway, which funded completion of the overhaul on the basis that the cost would be recovered through operation of the locomotive.

Keith Ashford C.Eng MIMechE, Locomotive Manager of The Gresley Society, said: "The vacuum brake needed careful attention before we could put the engine out with confidence. After static tests with the apprentices, yard steaming and three return trips on empty stock, the brakes were performing quite acceptably. Seeing No. 1744 back on the public service on 17 September, and then working 'Steam Back to the Forties' with the Quad-Art set, is exactly what we set out to achieve. Every mile she runs also helps the Society repay the North Norfolk Railway for seeing the overhaul through."

Graham Hukins, General Manager of the North Norfolk Railway, said: "No. 1744 is a star turn on the Poppy Line, and visitors to 'Steam Back to the Forties' were delighted to see Sir Nigel Gresley's oldest surviving locomotive in the thick of a five-engine weekend. The Gresley Society has entrusted her to us for the next 25 years, and it is a pleasure to have her earning her keep once again with the M&GN's Quad-Art set after the recent running repairs."

Wensleydale Railway commences further civil engineering work as part of plans to restore passenger services to Redmire

Wensleydale Railway has started a further round of major track and infrastructure repair work, as part of its on-going plans to restore passenger services from Leyburn to Redmire. The 5-mile section of line from the Georgian market town of Leyburn to Redmire village has been closed to the public since 2020. This has been due to the deteriorating condition of the track & infrastructure on this section of the railway. Some of the track is life-expired and dates back to before the First World War.

Since 2021, the railways volunteers and specialist contractors have been working hard to reopen the Leyburn to Redmire section of railway. The work has included drainage improvement, earthworks, cutting and embankment stabilisation, vegetation clearance, sleeper replacement and major track renewal.

In this latest round of infrastructure upgrade work, the railway has hired in a specialist rail contractor, Lampitt Rail Services, to support its plans. A 660-foot section of track (11 track panels) is currently being relayed to the west of Leyburn Station, using some donated materials recovered from the former Eggborough power station site in North Yorkshire. A considerable amount of sleeper replacement, re-ferruling of chairs and re-ballasting will also be done on this approx. 2.5-mile section of line between Leyburn and Wensley. Some further drainage improvement work will also be completed, and a user-worked farm level crossing will have its wooden crossing deck replaced with rubber decking panels and the section of track running through it will be relayed with concrete sleepers.

This work is expected to take approx. 3-4 months to complete and will see the Leyburn to Wensley section of track brought up to required operational standards by the end of this year.

The railway will then turn its attention to the final approx. 2.5 miles section of track from Wensley to Redmire. A detailed survey has been completed, and costs and plans are currently being developed. This final phase of the project will be a particularly challenging one as the work currently identified includes significant track and sleeper replacement, considerable ballast renewal, drainage and earthworks improvements and replacement of several farm level crossings. The estimated cost of this work is in the region of £420,000.

To date, the railway's Return to Redmire plans have cost approx. £250,000. This work has been funded by the railway's charitable Trust members, PLC shareholders and members of the public who have responded to the railway's previous fundraising appeals.

Nick Keegan, Fundraising and Marketing Manager at Wensleydale Railway said: "It's great to see further progress on our plans to restore this stunning scenic section of our railway. At 5 miles long, this part of our 22-mile railway is longer than several other heritage railways in the region. This project is arguably the railway's largest civil engineering project in recent years, and it's a testament to the hard work of our incredible volunteers, and the generous funding support we have received so far, that we are now approaching the half-way mark in our plans.

He continued: "The railway's Board has set a goal to restore passenger trains to Redmire by 2028. There is a huge amount of work ahead to achieve this ambitious target, and we are pursuing funding opportunities to raise the remaining £420,000 required to complete this major project. We are very grateful to everyone who has supported us so far. We hope that people can see the tangible progress being made and I would urge the public, as well as local people and businesses, to back us and our on-going plans to showcase our amazing region to visitors."

He added: "Reopening five miles of railway is not the end goal. We want to unlock Redmire's potential. We see this work as the foundation for a much wider regional development opportunity, with the railway playing a pivotal role in connecting Leyburn, Redmire and the wider Wensleydale visitor economy."

Further information on the railway's Return to Redmire plans, and how to donate, can be found on their website here: https://wensleydale-railway.co.uk/return-to-redmire/

Hopetown Darlington awarded prestigious museum accreditation

Hopetown Darlington has been awarded full Museum Accreditation, the UK industry standard for museums and galleries, recognising the quality, care and professionalism behind the town's flagship railway heritage attraction.

Administered by Arts Council England on behalf of the UK Accreditation Partnership, Museum Accreditation is the nationally recognised benchmark for well-run museums and galleries. The award confirms that Hopetown Darlington is properly managed and governed to nationally agreed standards, ensuring its collections are protected and preserved for future generations while remaining accessible and engaging for today's audiences.

Emmie Kell, Director Museums and Cultural Property at Arts Council England said: "We're delighted that Hopetown Darlington has been successful in gaining their accreditation status. This means that their Collections will be looked after and maintained offering inspiration, enjoyment and learning for the local community and visitors to enjoy now and in the future."

It recognises the dedication, hard work and passion that has gone into developing Hopetown Darlington since opening in July 2024, as well as the work undertaken to care for and share its nationally significant railway heritage collection comprising more than 30,000 objects and records. The achievement follows a detailed assessment process and highlights the progress made at Hopetown, which celebrates Darlington's pivotal role in railway history and inspires new generations through its exhibitions, collections, learning programme and events.

Councillor Libby McCollom, Darlington Borough Council Cabinet Member for Local Services, said: "Achieving Museum Accreditation is a fantastic achievement for Hopetown Darlington and recognition of the incredible hard work, dedication and professionalism of the entire team. Everyone involved should be immensely proud of what they have accomplished.

This nationally recognised award not only reflects the high standards being delivered at Hopetown but also showcases Darlington's commitment to preserving and sharing our world-famous railway heritage. It is a significant moment for the town and further strengthens Darlington's reputation as a destination of national importance for cultural heritage and tourism."

Mike Crawshaw, Head of Heritage and Culture at Darlington Borough Council, said: "Museum Accreditation is an important milestone for Hopetown Darlington as we continue to establish the attraction as a must-visit national destination. The railway heritage collection is an important feature of the visitor experience, telling the story of Darlington's world-changing role in railway history and providing a unique connection to the past. This recognition reflects the quality of the collection, and we'd encourage anyone who hasn't yet visited Hopetown to come and discover everything the site has to offer."

Accreditation opens up exciting funding opportunities for Hopetown Darlington, while also enabling the attraction to host touring exhibitions and access professional advice and support for its collection. It also gives confidence to donors and sponsors who may wish to support the museum in preserving heritage and inspiring future generations.

Accreditation covers museums of all types and sizes - from the smallest volunteer-run museums to national museums – and more than 1,700 museums are currently taking part in the scheme across the UK.

Since opening in July 2024, Hopetown Darlington has welcomed more than 410,000 visitors and become one of the region's must-visit attractions.

Great Central Railway Goes To Tender For Next Phase Of Multi Million Pound Reunification Project.

The Factory Flyover phase will see 60 metres of new railway built with contractors expected on site early next year.

The Great Central Railway is about to embark on the biggest and most complex section of its ambitious Reunification project so far. The award-winning Midland's heritage line is set to build another sixty metres of brand-new infrastructure at a cost of around £3.5m, as part of its plan to create an 18-mile living transport museum.

A tender process has begun which should see a contractor appointed before Christmas, with work expected to begin on site in early 2027. An elevated concrete viaduct above a factory car park and a new bridge across Railway Terrace Road in Loughborough should be in place before the end of the year.

"This is a hugely significant moment for us," said GCR General Manager Malcolm Holmes. "We're actually building two sections of the Reunification project at the same time. The new bridge and viaduct will add to the three pieces of Reunification already built, taking our total investment in the project so far to £8.5m, the vast majority being contributed by supporters around the world. It's their passion which has helped us get this far."

The Reunification project will restore 500 metres of lost railway track, reconnecting the surviving Nottinghamshire and Leicestershire sections of the Great Central Railway for the first time since the intervening track was torn up in the 1970s. Significant progress has already been made, with a new bridge spanning the Midland Main Line at Loughborough, the restoration of a historic canal bridge and the complete replacement of a road bridge.

Once complete, the reunited railway, supported by vintage bus connections, will create a major visitor attraction spanning Leicestershire and Nottinghamshire. It is expected to draw hundreds of thousands of visitors to the East Midlands, support around 150 jobs and generate an estimated £250 million for the regional economy over 30 years.

Andy Fillingham of the Great Central Railway (Nottingham) said, "Earlier this year we hosted Flying Scotsman and Tornado together and we could see the appetite everyone has for completing the link and running trains along 18 miles. This project was once described as impossible and while there is much more to do, these next two stages, being built at the same time, will prove we are as committed as ever to finishing it!"

After the Factory Flyover stages around £18m is required to complete the railway, rebuild locomotive sheds and prepare for the link up.

Midlands Biggest Bus Festival Announced with Over 100 Heritage Vehicles Expected to Attend

GREAT CENTRAL RAILWAY
LOUGHBOROUGH, LEICESTERSHIRE

A major new event celebrating the history and heritage of bus transport is set to take place in the Midlands next year, with the Midlands Bus Festival coming to the Great Central Railway and Great Central Railway Nottingham on May 8th and 9th 2027.

Organised jointly by the Great Central Railway, Great Central Railway Nottingham, Leicestershire Transport Heritage Trust and Nottingham Area Bus Society, the festival aims to become the biggest gathering of buses and bus preservation vehicles in the Midlands.

More than 100 vehicles are expected to attend at both Quorn Yard at Quorn and Woodhouse Station and Ruddington Fields, with buses not only on static display but also taking to the road throughout the weekend as part of an extensive programme of passenger rides.

Visitors will be able to enjoy a range of routes connecting the Great Central Railway and GCRN, alongside services operating around the local area, offering the opportunity to experience a wide variety of preserved buses in action.

The event is expected to attract bus enthusiasts, preservation groups, vehicle owners and visitors from across the region and beyond.

With preparations already underway, organisers are encouraging everyone to save the date for May 8th and 9th, with further information about participating vehicles, routes, tickets and the full event programme to be announced over the coming months.

Malcolm Holmes, General Manager at Great Central Railway said “We’re incredibly excited to be planning what we hope will be one of the biggest bus gatherings the Midlands has ever seen, a fantastic opportunity to celebrate the region’s rich bus heritage on a truly impressive scale. We’re now inviting owners and preservation groups to get involved and help us make the event as spectacular as possible. If you have a bus or heritage vehicle that you’d like to feature, we’d love to hear from you at buses@gcrailway.co.uk.”

Further event details will be released in due course. Follow the Great Central Railway and the participating organisations on social media for the latest announcements or visit www.gcrailway.co.uk

East Lancs Railway

BR Blue Class 56 006, with Mainline livered 58 023 powers away from Burrs Country Halt with the 14:15 Bury to Rawtenstall service on September 26th. *Paul Senior*

East Lancs Railway

A very scruffy Class 20 No. D8069 tops and tails with 40 106 on a Rawtenstall - Bury service through a very wet Irwell Vale on September 18th. *Jeff Nicholls*

East Lancs Railway

A rare combination! Class 56 006 (numbered as 56 001 on this side) leads 58 023 through the heavy drizzle of Irwell Vale on a Rawtenstall - Heywood service on September 18th. *Jeff Nicholls*

That might look like mist at Irwell Vale but it's a curtain of heavy rain. It doesn't seem to bother the sheep though as Class 20 No. D8069 leads 40 106 into the station on a Heywood - Rawtenstall service on September 18th. *Jeff Nicholls*

The very first service of the East Lancs Autumn Diesel Gala was headed by a very smoky Class 58 023, seen here passing non-stop through Burrs on September 18th. *Jeff Nicholls*

East Lancs Railway

On September 18th, Class 40 106 ‘Atlantic Conveyor’, departs Summerseat with 50 015 ‘Valiant’ on the rear en route to Heywood. *Michael Lynam*

Class 58 023 ‘Leicester Depot’ approaches Summerseat on a service to Rawtenstall on September 18th. *Michael Lynam*

Class 50 015 is seen on the rear of a service to Heywood as it passes through Summerseat on September 18th. *Michael Lynam*

East Lancs Railway

Class 25 279 approaches Summerseat with a service to Heywood on September 18th. *Michael Lynam*

Class 56 006 (running as 56 042) approaches Irwell Vale on September 19th with a service to Bury. *Michael Lynam*

Class 20 No. D8069 approaches Summerseat with a demonstration freight from Bury - Ramsbottom on September 18th. *Michael Lynam*

East Lancs Railway

On a sunny September 20th, long term visitor to the line, Class 58 023, passes Bury South on the last leg of its journey from Rawtenstall to Heywood. *Lee Stanford*

Class 40 106 'Atlantic Conveyor', approaches Irwell Vale with a service to Heywood on September 19th. *Michael Lynam*
